

## Stellar Power Plant 3

---

The Stellar™ Power Plant™ 3 is our most compact high-end personal power generating station: an all new class of affordable Power Plant AC regenerator that takes ordinary wall voltage and rebuilds it into perfect AC.

The Stellar 3 features an ultra-low impedance analog AC power amplifier, pure DSD FPGA based analog sine wave generator, and low distortion high-dynamic-peak-capable outputs found only in PS Audio Power Plants. The Stellar 3 is capable of fully powering most small to medium sized systems

bringing forth all that's possible from your HiFi system, ensuring you get the same great performance every time you listen.

The P3 includes 3 separate zones delivering 300 watts of pure continuous regenerated power, 500 watts of short term power(up to 30 seconds), and dynamic peak power (3 second or less) of a whopping 900 watts for explosive dynamics. From small to medium power amplifiers to all your source equipment, the Stellar Power Plant 3 will work magic on your system's performance with pure, regenerated power. The Stellar 3 also includes up to 1000 watts of filtered and protected power for larger power amplifiers.

With your system powered directly from the output of the Stellar 3, dynamics and openness are breathtaking. New voices, new harmonics and a renewed sense of musicality are yours the moment the Stellar 3 starts up. This is one of the most important pieces of audio equipment you can own, building a firm and reliable foundation for your system that will serve you for years to come.
