## SOLEN INC.

## HEPTA-LITZ AIR CORED INDUCTORS <br> PERFECT LAY HEXAGONAL WINDING

SOLEN Inc. was the first inductor design company to introduce inductors made with Hepta-Litz conductors. Most of the time, until now, only one parameter was considered for designing crossover network inductors and that is dc winding resistance. The problem is that music is far from being dc and other non linear losses arise from ac frequency that can increase the ac winding resistance many times the dc value, even at audio frequency. Let us consider some of those losses.

As the frequency increase, additional power losses occur in the winding due to eddy currents in the conductors and by the magnetic fields within the winding. In the design of inductors both skin effect and proximity effect need to be considered. Both effects depend on the ratio of the conductors' diameter to the penetration depth of the electrons.

## Skin Effect

Skin effect is the tendency for the alternating current to flow near the surface of the conductor as the frequency increase. It is due to eddy currents in the conductor that arise from the alternating magnetic field associated with the current in the conductor itself.

## Proximity Effect

Proximity effect is the tendency for the alternating current to flow and return along the length of each conductor within the winding in a way that opposes the magnetic field of the winding as the frequency increase. It is due to the eddy currents in the conductor that arise from the alternating magnetic field interaction of the other conductors within the winding.

## Litz Conductor

To reduce those losses, we have to replace the solid conductor with a number of separately insulated smaller conductors twisted together, the Litz conductor. The reduction of the conductors' diameter along with the increase in the number of twisted insulated conductors that tends to occupy all possible positions in the cross section of the resulting conductor are very effective in reducing both effects. The smaller insulated conductor makes the current to divide uniformly between them thus reducing the skin effect losses. The twist of the smaller insulated conductor cancels the EMF's induced by the traverse magnetic field thus reducing the proximity effect losses.

This design idea, Hepta-Litz that consists of seven twisted insulated conductors, results in equalizing the ac resistance to dc resistance ratios in the usable audio frequency band that is establishing new standards in inductor quality. The HeptaLitz Air Cored Inductors Perfect Layer Hexagonal Winding are a clean slate design, based on proven state-of-the-art technology that we have successfully transferred and merged to achieve superiority on all fronts. They will dramatically improve the performance of any loudspeaker by linearizing the inductor reactance curve to the ideal inductor reactance.

L10 $=7 \times .80 \mathrm{~mm}$ conductor's $\varnothing=2.4 \mathrm{~mm}$ conductor $\varnothing=\mathrm{S} 12=2.0 \mathrm{~mm}$ conductor $\varnothing$ dc resistance
L12 = $7 \times .64 \mathrm{~mm}$ conductor's $\varnothing=2.0 \mathrm{~mm}$ conductor $\varnothing=\mathrm{S} 14=1.6 \mathrm{~mm}$ conductor $\varnothing$ dc resistance
L14 $=7 \times .51 \mathrm{~mm}$ conductor's $\varnothing=1.6 \mathrm{~mm}$ conductor $\varnothing=\mathrm{S} 16=1.3 \mathrm{~mm}$ conductor $\varnothing$ dc resistance
L16 $=7 \times .40 \mathrm{~mm}$ conductor's $\varnothing=1.3 \mathrm{~mm}$ conductor $\varnothing=\mathrm{S} 18=1.0 \mathrm{~mm}$ conductor $\varnothing$ dc resistance

SOLEN 2008

## SOLEN INC.

## HEPTA-LITZ AIR CORED INDUCTORS PERFECT LAY HEXAGONAL WINDING

- GENERAL INFORMATION

| Type | : Air Cored Inductor. |
| :--- | :--- |
| Conductors | : Pure Copper Seven Twisted Insulated Conductors. |
| Dielectric | : Red Polyurethane Polyamide Enamel. |
| Construction | : Hollow Cylindrical Type, Radial Leads. |
| Winding | : Perfect Layer Hexagonal Self-Supporting Type. |
| Coating | :Varnish Dip With Four Black Nylon Ties. |
| Leads | :Pure Copper. |

- TECHNICAL DATA

| Inductance Range/Tolerance | : $0.10 \ldots 30 \mathrm{mH}, \mathrm{E} 24$ series, $\pm 1$ \%. (see specifications for details) |  |  |
| :---: | :---: | :---: | :---: |
| Conductor Material | $: \geq 99.99$ \% Purity Annealed Copper. |  |  |
| Electrical Conductivity | : $\geq 101.5$ \%. |  |  |
| DC Resistance | : Very Low (see specifications for details) |  |  |
| Oxygen Content | : $\leq 200 \mathrm{ppm}$ on surface. |  |  |
| Temperature Coefficient | : $0.00393 /{ }^{\circ} \mathrm{C}$. |  |  |
| Temperature Range | : $-55{ }^{\circ} \mathrm{C}$ to $+85{ }^{\circ} \mathrm{C}$. |  |  |
| Insulation Temperature | $: 130{ }^{\circ} \mathrm{C}$. |  |  |
| Solderable Temperature | $: 360{ }^{\circ} \mathrm{C}$. |  |  |
| Test Voltage | : 1000 VAC |  |  |
| Total Conductor Diameter | : L16 = 1.3, $\quad \mathrm{L} 14=1.6$, | $\mathrm{L} 12=2.0$, | $\mathrm{L} 10=2.4 \mathrm{~mm} \varnothing$ |
| Conductors Number/Diameter | : L16 = $7 \times .40, \mathrm{~L} 14=7 \times .51$, | L12 = $7 \times .6$ | $\mathrm{L} 10=7 \mathrm{x} .80 \mathrm{~mm} \varnothing$ |
| Skin Effect Rac = Rdc | $: L 16=27, \quad L 14=18$, | L12 = 12, | $\mathrm{L} 10=8 \mathrm{KHz}$ |
| Skin Effect Rac = Rdc +10\% | $: L 16=100, \quad L 14=70$, | L12 = 45, | L10 $=30 \mathrm{KHz}$ |
| Winding Space Factor | : L16 = 86, L14 = 87, | L12 = 88, | L10 = 89 \% |

## - FEATURE

```
Integral Wheeler Formula Application.
Computer Optimized Inductor Dimension.
Ultra Linear AC Resistance
Linear Phase Angle between Current and Voltage.
Linear and Stable High Frequency Characteristics.
Very Low Magnetostriction Distortion.
Constant Inductance with Voltage Variation.
Constant Inductance with Current Variation.
No Saturation Distortion.
No Hyteresis Distortion.
```

## - ELECTRICAL PERFORMANCE

```
Very High Quality Factor.
Very Low Skin Effect Losses.
Very Low Proximity Effect Losses.
Low A.C. Resistance.
Low D.C. resistance
Low Self Capacitance.
```
