

# WIREWORLD®

## CABLE TECHNOLOGY

Wireworld has introduced its new Matrix 2 shielded power cord extender, featuring a total of seven high quality power outlets and flexible mounting options for expanded access to power in a component rack or stealth installation. Additionally, when used with one of the company's acclaimed 52 line of power conditioning cords at the inlet, the Matrix 2 can be used to extend the benefits of Wireworld power cords to components that do not have a removable power cord.

The Matrix 2 power cord extender is designed to provide the additional outlets required by systems with or without dedicated power conditioning equipment. It features a sturdy extruded aluminum chassis with seven high-quality NEMA 5-15 outlets, and an IEC 320 power inlet jack. The enclosure is shielded and grounded, and all internal wiring is 13 AWG solid copper to provide clean high-current power capability while preventing the introduction of audible interference from external electromagnetic sources.

The Matrix 2 is a power distribution block which is particularly useful for home theater installations where there are never enough power outputs. Its compact size allows for easy placement behind or to the side of audio/video racks. The Matrix features selectable mounting options via a bracket re-orientation and therefore is one the most user friendly product on the market. The Matrix 2 is a perfect solution for those requiring a cost effective way to absorb power line noise and distribute power efficiently, when combined with the Wireworld Series 7 power cords.
