

WIREWORLD®

CABLE TECHNOLOGY

The Equinox 8 provides amazing value to owners of premium quality AV systems, as it retains unique performance advantages and OCC-7N conductors of Wireworld's Eclipse Series at a price that suits a wide range of quality AV systems. In Cable Polygraph tests, this cable has provided the highest fidelity of any microphone cable.

From the recording microphones to our ears, the better the links in the audio chain, the more musical detail and expression we hear. Wireworld interconnects are designed, tested and manufactured to provide the most sonically transparent path for your music. Their patented DNA Helix internal structure consists of parallel strands in layered flat conductors that channel electromagnetic signal energy more efficiently than coaxial and twisted pair cables.

They also benefit from Composilex 3, a third generation composite insulation technology with lower triboelectric noise than any conventional low loss insulation, including DuPont Teflon®. With upgraded designs and superior materials, Wireworld Series 8 interconnects embody real progress in preserving tone quality, imaging, and dynamic expression.

Series 8 Upgrades

The upgrade to Composilex 3 in Series 8 interconnects improves tonal purity and image focus, while the increased number of strand groups has increased detail, soundstage separation, bass extension and dynamic expression.
