

WIREWORLD®

CABLE TECHNOLOGY

Terra interconnect utilizes Wireworld's Flexi-Flat cable design for a clean and dynamic sound at a price of generic cables. Terra is an extremely flexible cable. Flexi-Flat technology is a unique cable construction made of anaerobic copper, where each wire is insulated to reduce dielectric absorption at high frequencies, while maintaining sound fidelity. It ensures the highest transmission quality even over long distances and minimizes inductive losses as well as improves the transparency and dynamics of spatial effects.
