

WIREWORLD[®]

CABLE TECHNOLOGY

WireWorld Horizon Speaker Cable: Wireworld's Horizon™ high-end flat speaker wire provides high value and ease of concealment. With 16 gauge Flexi-flat OFC conductors in flexible white insulation, this flat speaker cable is as thin as a dime (1.4 mm) and only 3/8" (10mm) wide, making it ideal for concealment under moldings and rugs. Wireworld's audio speaker cables feature a patented DNA Helix design that was engineered to minimize electromagnetic loss more effectively than ever before. Their superior designs and materials clearly disprove the common belief that a heavier gauge is all a speaker wire needs. From a highly flexible in-wall, to objectively engineered reference standards, Wireworld speaker cables will open up your ears to an exciting new listening experience.
