HARDWARE COMPATIBILITY

Matharhand	Mini ITV*
Motherboard	
	170 x 170 mm
_	*Maximum primary side component height: 47 mm
Power	Flex ATX. Max length: 150 mm
supply	
CPU cooler	Height:
	37 mm
PCIe riser	Required for graphics card or other PCI card support.
cable	
	Hole pitch:
	108 mm
	Length:
	29-35 cm end-to-end / 24-30 cm along flexible portion
	27-33 cm cha-to-cha / 24-30 cm along ficklote portion
	Connectors
	Connectors:
	0° or 180° male to 0° or 180° female
	D 1 1 1 1
	Recommended models:
	Velkase VC-S300G3; VC-S290G4
Graphics	Maximum clearance, including space for cables. Cables
card	require 16 mm+ if not recessed and routed within the
$(L \times W \times H)$	bounding box area of the board.
	270 x 43 x 143 mm
	261 x 43 x 148 mm
	2.0 PCI slots thick
	Maximum backplate thickness: 6 mm
	2-slot graphics cards must not have protrusions past the edge
	of the PCI bracket
Memory	Height:
	42 mm
Storage	1x 2.5" HDD or SSD (7.0 mm thick)
	Additional storage for configurations with < 200 mm long
	graphics cards:
	3x 2.5" drives (7.0 mm thick) or 2x 2.5" drives (12.5 mm
	thick)
Case fans	2x 40 mm fans, up to 30 mm thick
LU ASE TANS	+∠x 40 mm rans, ud to 50 mm thick

	30 mm hole spacing; mounting hardware not included
Handles	Hole pitch:
	128 mm
	Screw diameter:
	4 mm maximum
Internal	Required only if routing graphics card output to the rear of
display	the case and not using the stand.
cable	
extensions	Hole pitch: 27 mm
	Screw diameter: 4 mm maximum
	Female connector clearance: 35 mm (45 mm with horizontal graphics card shift and 10 mm clearance reduction to graphics card height; requires VC-S290G4 PCIe riser cable or other 35 cm long PCIe cable)
	Male connector clearance: 11 mm (22-36 mm with vertical graphics card shift and equal graphics card length clearance reduction; requires VC-S290G4 PCIe riser cable or other 35 cm long PCIe cable)
External display cables	60 mm maximum total protrusion from the graphics card when using the included stand with rubber feet

PACKAGE CONTENTS

- Velka 5 chassis with pre-installed power button, stand. *PCIe riser cable, handle, and display cable extensions not included*
- 14x 3M Bumpon adhesive rubber bumpers
- Hardware box; contents listed below. Quantities may vary.

x21	M3x0.5 5 mm countersunk screw	x5	M3 3 mm spacer
x27	M3x0.5 4 mm round head screw	x6	M3 4 mm spacer
x9	M3x0.5 10 mm round head screw	x4	M3x0.5 standoffs (each): 5mm; 8 mm; 10 mm
x6	6-32 6 mm round head screw	x1	PCI card vertical offset bracket
x12	M4x0.7 8 mm flat head screw	x1	PCI card retention bracket
x10	M3 1 mm spacer	1	Rear panel port cover
		x4	

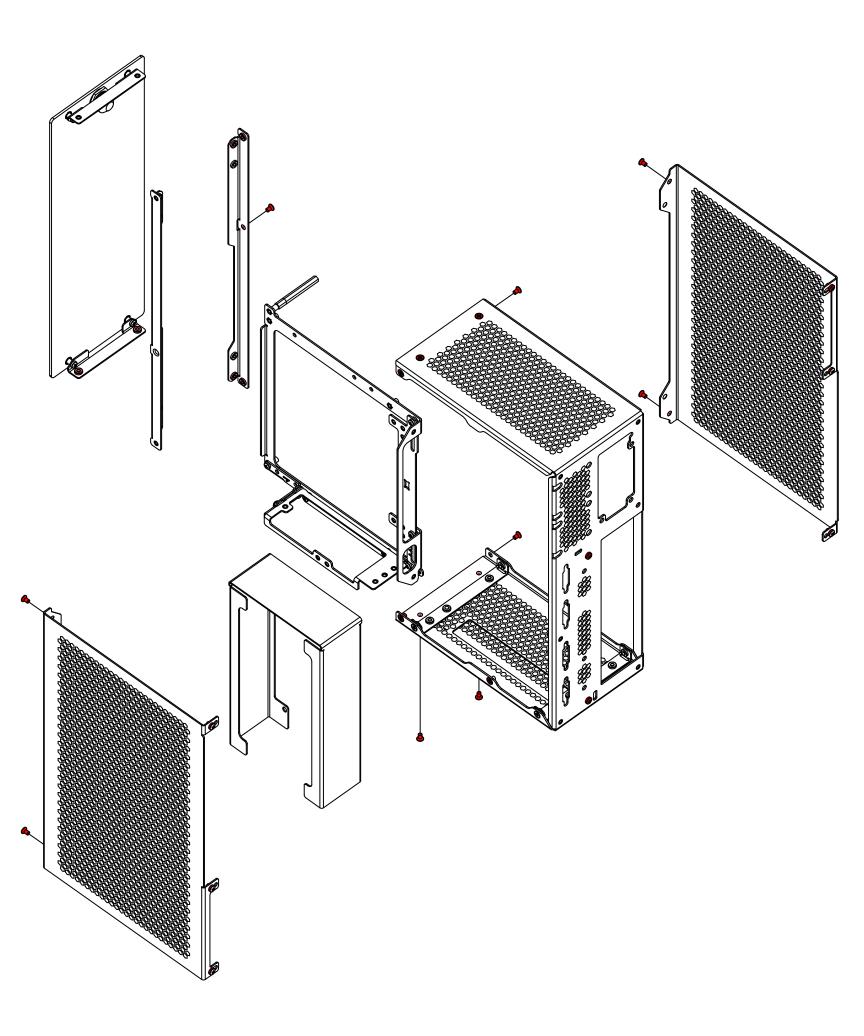

REQUIRED TOOLS

#2 Phillips (PH2) screwdriver

CASE DISASSEMBLY

- Perform initial system assembly with all components and cables outside of the case
- Work on a soft, clean surface
- Once complete, disassemble the case to the following state

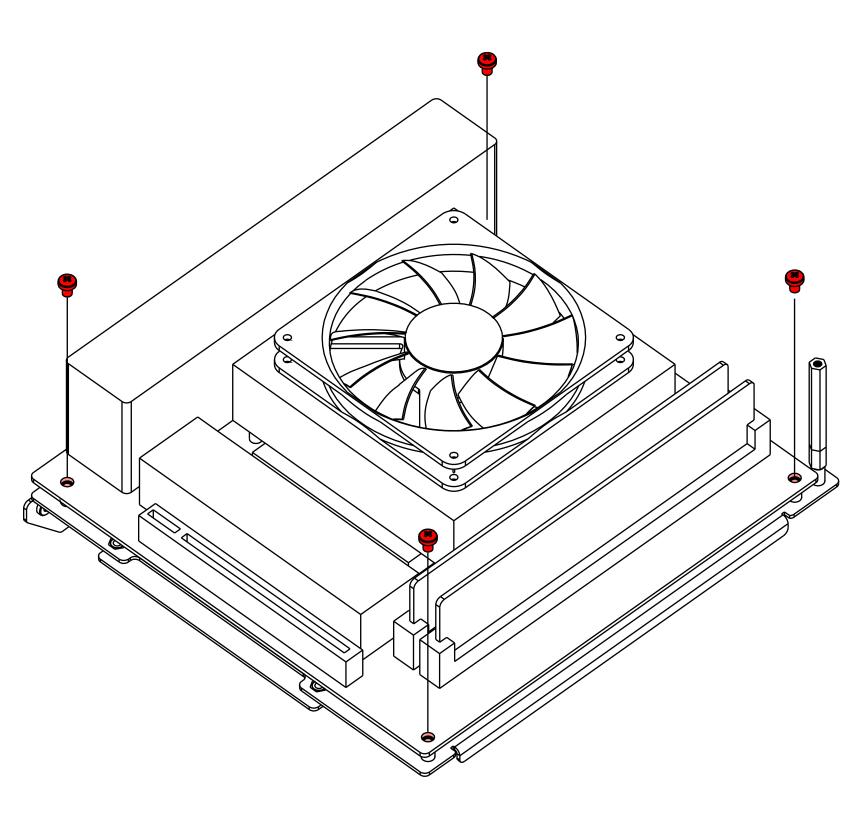

MOTHERBOARD

• The CPU, CPU cooler, RAM, and storage should be installed onto the motherboard prior to this step.

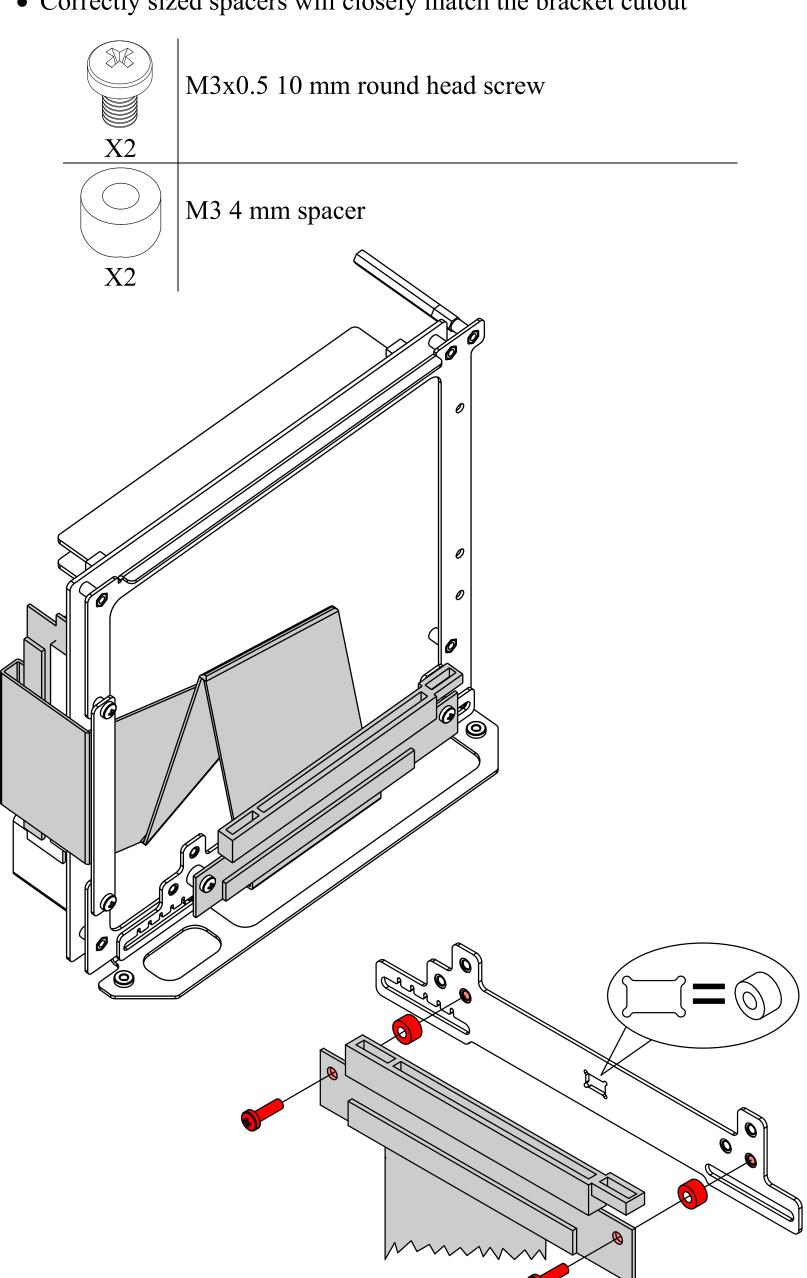

M3x0.5 4 mm round head screw

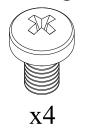

PCIE RISER CABLE

- Bend the male and female ends 180 degrees
- Flat ribbon cables such as the VC-S300G3 require 2 additional diagonal folds to make a 90 degree turn
- Correctly sized spacers will closely match the bracket cutout

GRAPHICS CARD

• Plug in internal display cable extensions after this step, if in use

M3x0.5 4 mm round head screw

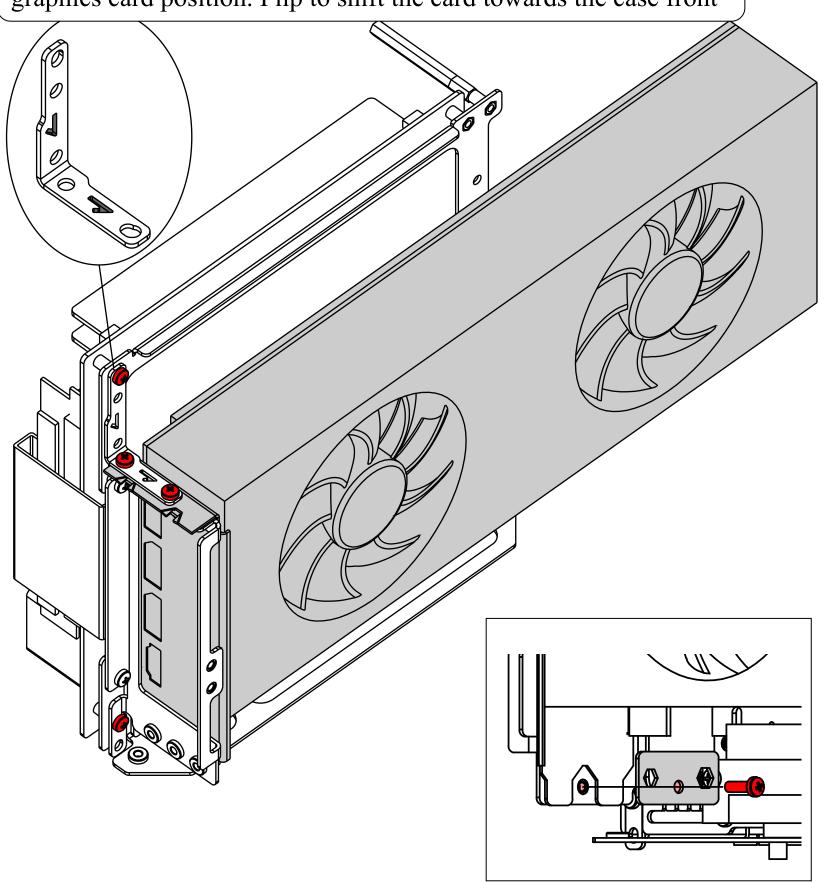

M3x0.5 10 mm round head screw

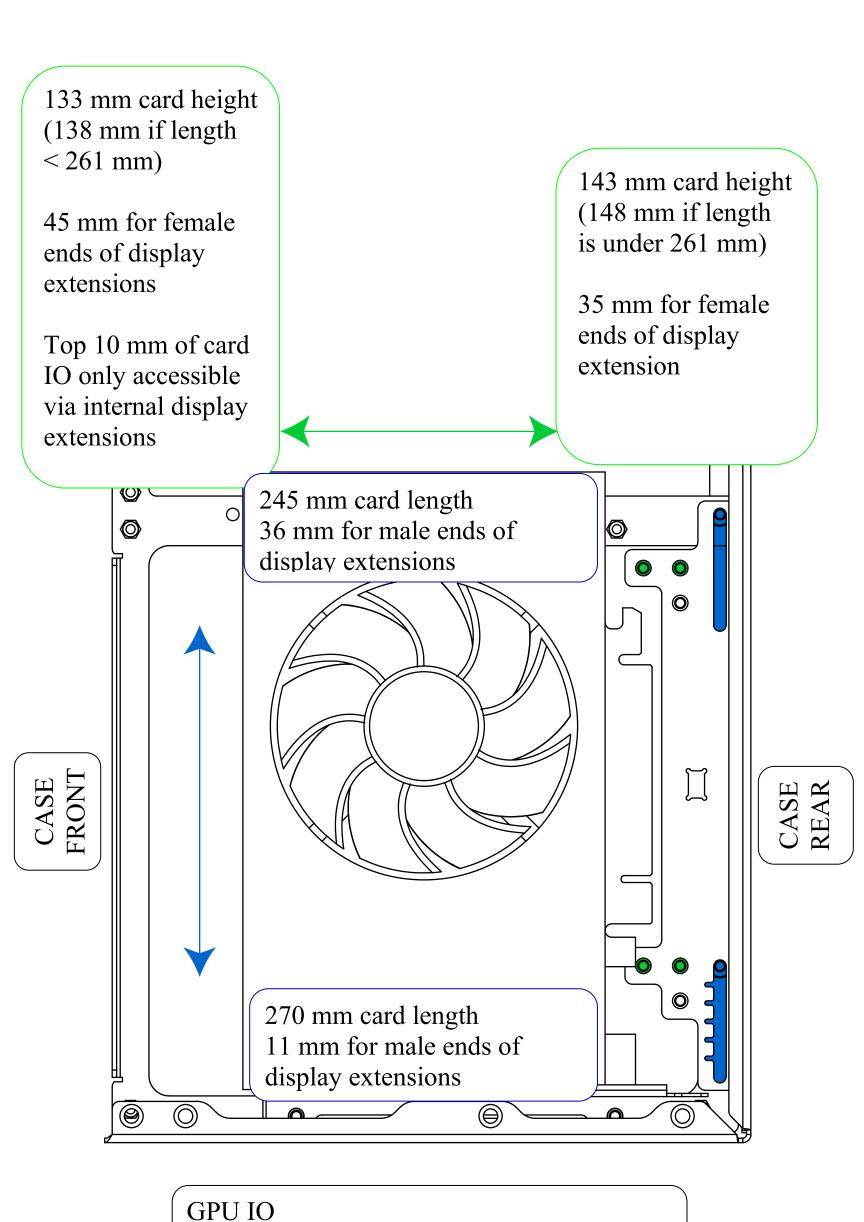

PCIe card retention bracket

The arrow closest to the motherboard tray indicates the relative graphics card position. Flip to shift the card towards the case front

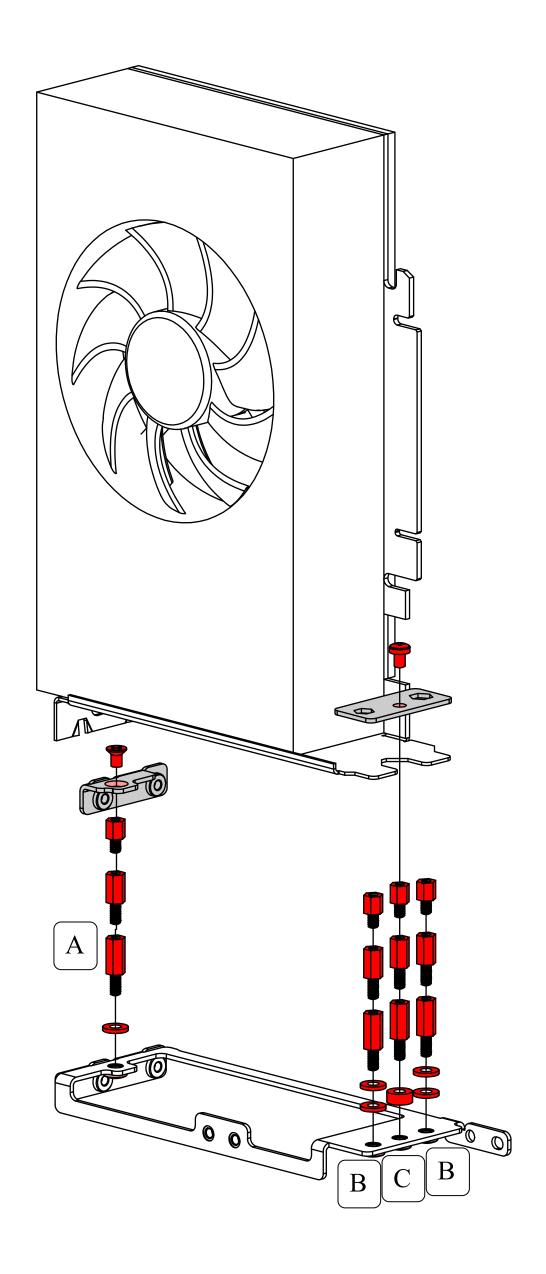

- The graphics card may be offset horizontally and vertically to:
 - O Enable compatibility with larger internal display extensions
 - O Improve airflow with "pass-through" graphics card coolers
 - O Vertical and horizontal shifting requires a VC-S290G4 PCIe riser cable or other 35 cm long PCIe cable

Male display extension connectors (if used)

• Maximal 25 mm vertical offset shown below

• Vertical graphics card offset

1 = 1 mm spacer

3 = 3 mm spacer

5 = 5 mm standoff

8 = 8 mm standoff

10 = 10 mm standoff

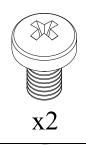

Internal extension male connector clearance (mm)	Stack A composition
11	N/A
22	10
23	10 + 1
24	10 + 1 + 1
25	8 + 5
26	8 + 5 + 1
27	10 + 5
28	10 + 5 + 1
29	10 + 5 + 1 + 1
30	10 + 8
31	10 + 8 + 1
32	10 + 8 + 1 + 1
33	10 + 8 + 3
34	10 + 8 + 3 + 1
35	10 + 8 + 5
36	10 + 8 + 5 + 1

Stack B= Stack A + 1 mm Stack C= Stack A + 2 mm

Use 1x 3 mm spacer whenever 3x 1 mm spacers are required

MOTHERBOARD TRAY INSERTION

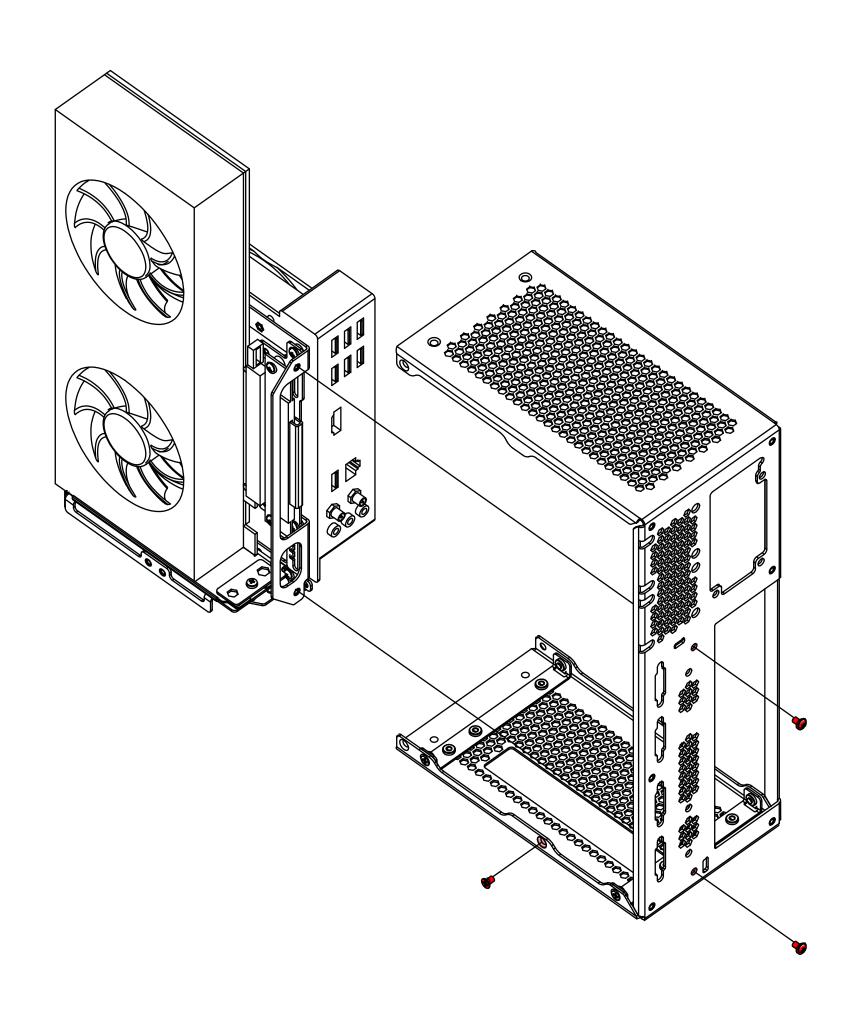

- Install the motherboard IO shield in the appropriate orientation
- Pay attention to the PCIe cable to prevent it from being caught on any edges

M3x0.5 4 mm round head screw

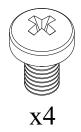

M3x0.5 5 mm countersunk screw

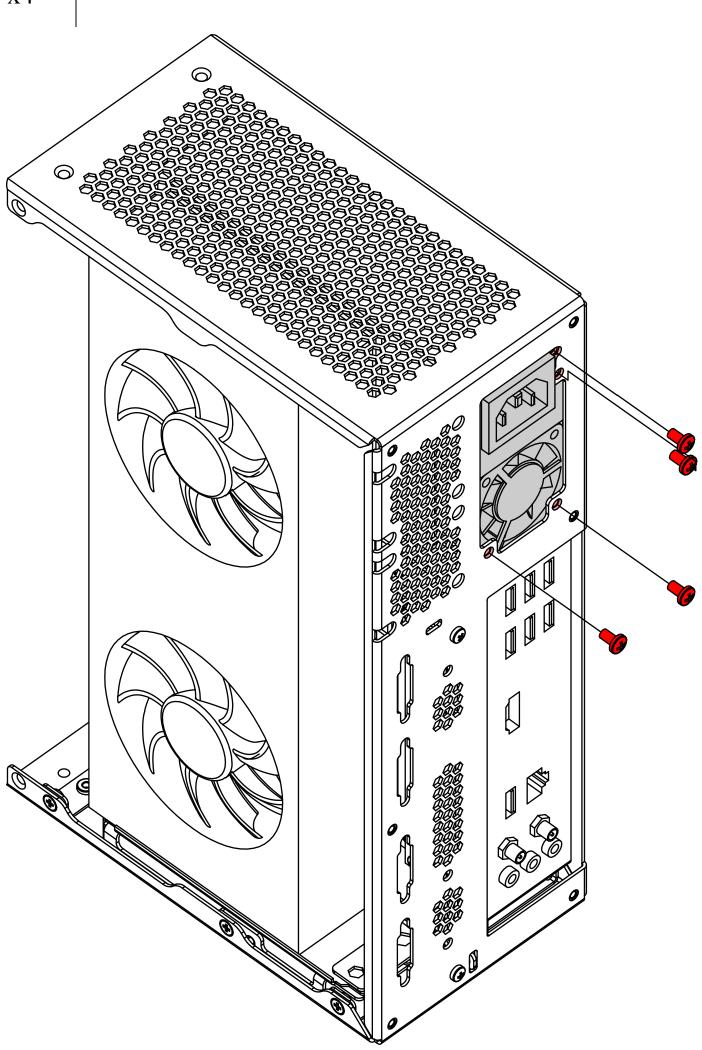

PSU

• Connect all power cables after mounting the power supply

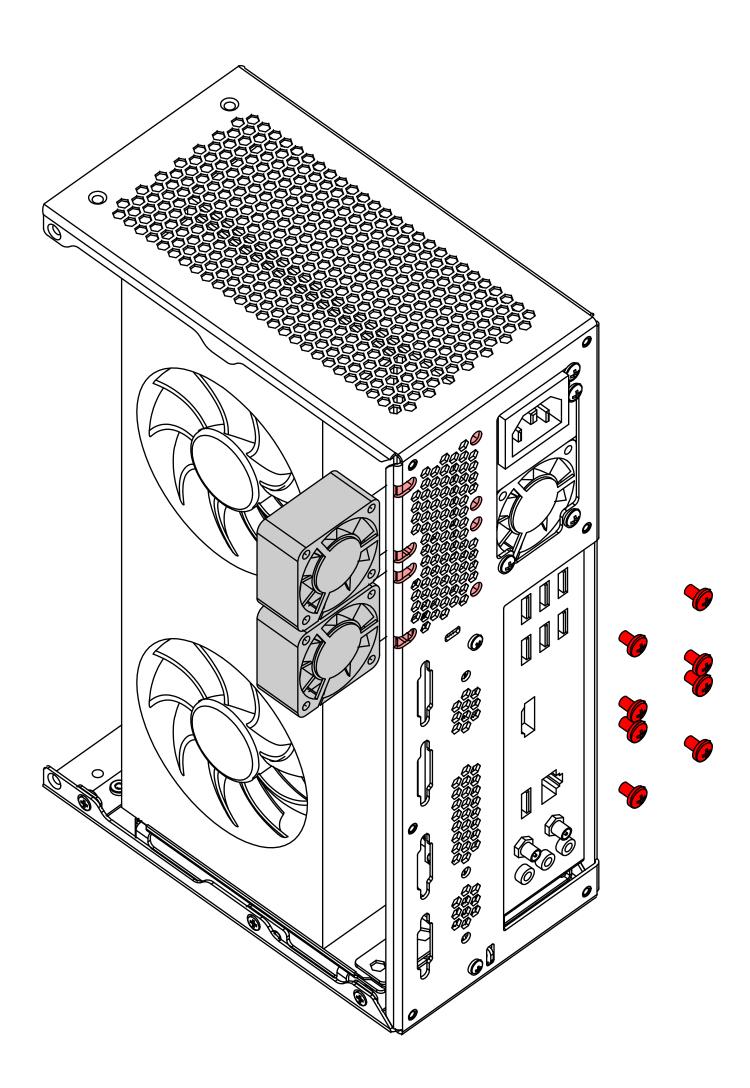

6-32 6 mm round head screw

CASE FANS

- Attach up to 2x 40 mm fans with fan screws (not included)
- Plug in fan headers

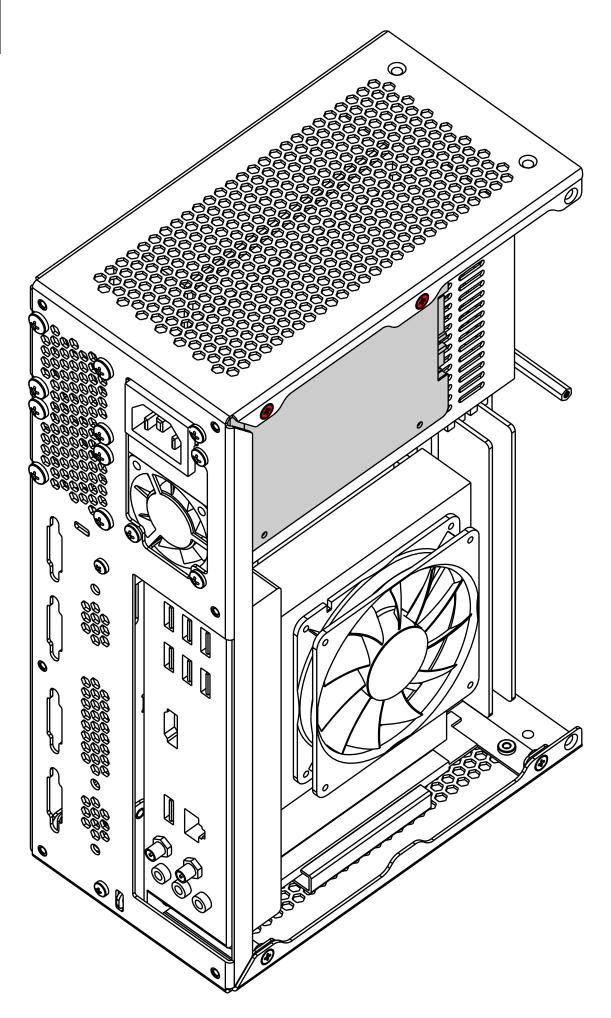

DEDICATED SATA DRIVE

• Connect the SATA data and power cables to the storage drive and motherboard at this step

M3x0.5 5 mm countersunk screw

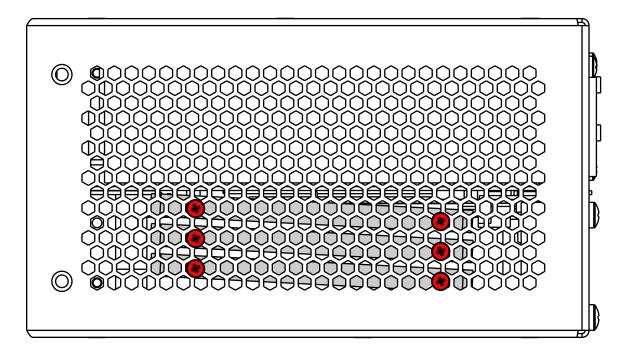

ADDITIONAL SATA DRIVES

- Graphics card must be < 200 mm in length
- Screws can be hidden by flipping the case and using internal display cable extensions for the graphics card (if applicable)

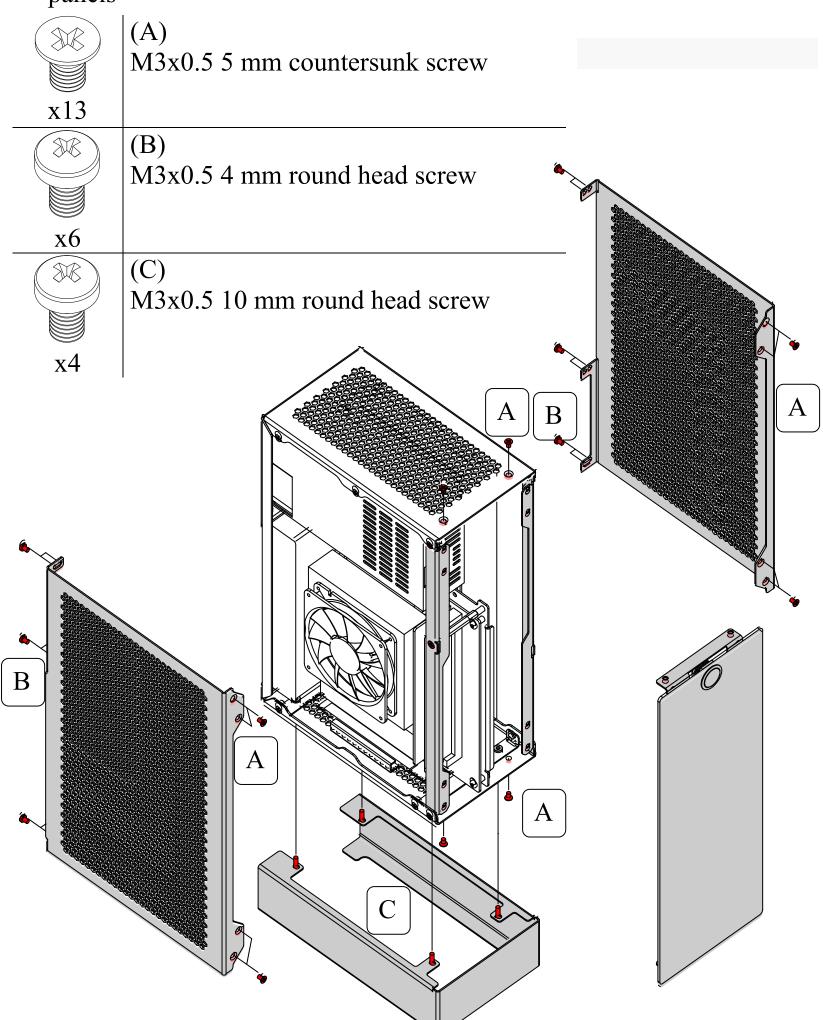

M3x0.5 4 mm round head screw

CLOSING THE CASE, STAND, RUBBER FOOT INSTALLATION

- Install port covers at the case rear if not using display extensions
- Wipe the case surface to improve rubber foot adhesion
- Stick 4 adhesive rubber bumpers onto the bottom of the stand/case of the chosen orientation
- For quieter operation and increased internal clearances, mount the side panels using the adjacent mounting holes. The side panels will bend inwards at the center due to their concave shape, which can be partially mitigated by inserting rubber bumpers between the case body and side panels

TROUBLESHOOTING

- Screw heads stripping
 - o Ensure that you are using the appropriate #2 Phillips driver for the included screws. Using any other type of driver for the included screws risks damaging the screw heads and eventually making them difficult or impossible to remove. Replace damaged screws.
- System instability or no display output from the graphics card while using PCIe gen 4+ motherboard and graphics card with an older gen PCIe riser cable
 - Manually set PCI link speed in UEFI BIOS to match that of the PCIe riser cable (ex: gen 3). If there is no display output in UEFI BIOS, use onboard graphics (if available) or plug the graphics card directly into the PCIe slot without the cable to change this setting.
- Unstable display output or no display output while using internal video output extension cables
 - Use an internal extension cable that matches the display's requirements or reduce the display's settings to match the bandwidth that the cable supports (ex: DP 1.4 cable for a DP 1.4 display, HDMI 2.1 cable for an HDMI 2.1 display).
 - Avoid converting the signal between different video standards such as DP to/from HDMI. If conversion is absolutely required, use an active adapter cable as opposed to a passive adapter cable or active discrete adapter.
 - o Connect to a different graphics card port
 - Use no more than one cable externally to carry the signal to the display. Use the highest quality and shortest cable available.
 - o Replace the internal extension cable
 - Connect the external cable directly to the graphics card with or without the use of the case stand

SUPPORT AND SERVICE

For all inquiries, please email contact@velkase.com
