Instructions

Operation step and functions

- After connecting the cylinder, need double confirm there is no leakage, then put the grease tray and cooking grill in the right place.
- First time use the appliance, should close the door without any food inside, use high fire to cook 5 mins, for high-temperature disinfection and smell remover.

- First time use the grease tray, also should use high fire to cook 1 min for high-temperature disinfection and smell remover.
- Cooking grill with tinfoil covering is used for cooking spare ribs, chicken wing, chicken, shrimp, and vegetables, etc.
- Upper burner is used for making soup, rice, noodles and boil water, etc.

Use tips

- * As always use the appliance outdoor which needs to remove the hose, there is lots of air inside the hose, it lowers the ignition success rate. So suggest that pressing the valve of the burner for 3~5 seconds to let out the air.

Lighting instruction

- * Open the glass door and remove the grease tray, push down the control knob for 3 seconds, then turn it anticlockwise to the 90° position, when you saw it is lighting, still keep pushing the knob for 5 seconds then leave it. If the burner has not lit, turn the knob 'OFF', and repeat the step above until it is lighting.
- * If the burner has not lit after 3 attempts, wait 3 minutes and repeat the above steps.
- * After the burner is lighting, you can adjust the flame by turning the control knob between high and low, this no need to push down the knob.
- * After using the appliance, turn off the valve of the gas cylinder, then turn off all the control knob after the fire gone.

Trouble Shooting

- If you find any problem with the appliance, contact the after-sale department by email, inform serial no., and detail phenomenon.
- You have to pay the material cost if due to the expiration of guarantee time.

The below state might not be a failure, to save your time, please check it carefully before email customer service.

Exception	Cause analysis	Solution
Failure of ignition ①	The hose contains much air or cold weather.	Light the upper burner first then light the oven, or use the ignition gun.
Failure of ignition ②	Use a non-standard, adjustable regulator.	Must use the fixed regulator with 2.74 kPa.
Failure of ignition ③	The gas is impure or with high impurity.	To judge the gas pure or not, you can see the fire. Fire in blue means pure, fire in red means impure.
Temperature rises slowly	In outdoor environments humidity, the temperature is not constant.	Warm up the oven to 392°F before putting the food inside, also try to put the oven in a sheltered corner.
