Green-fit your indoor space with Soltech

SOLTECH FAQ

Who are we?

Soltech, a small business based in Bethlehem, Pennsylvania, was founded in 2016 with the vision of supporting sustainable indoor farming. With that in mind, our founders' set out to create a revolutionary product. The result was the Aspect, the world's first LED grow light that seamlessly blends functionality and design.

Our lights use a precise photosynthetic spectrum, providing plant enthusiasts with a vital tool for promoting plant growth in any setting while also creating museum-quality ambient lighting.

Do you have a Reseller Program?

Yes! Your business can sign up to be a Soltech reseller on our website under the Commercial & Wholesale Partnership tab. There, you can create an account on the portal, where you can unlock trade pricing and place an order. Our shop minimum is \$200 USD.

Sign up at https://soltech.com/pages/commercial-plant-lighting

Why should my business sign-up to be a reseller?

As a reseller, your business has access to all of our products at a generously discounted rate. We offer complimentary marketing and educational tools, painless ordering and returns, a 3–5 year warranty, and free express shipping to the US and select countries.

LIGHTING FAQ

Why are Soltech lights so pricey?

Our product pricing reflects the premium quality and craftsmanship that goes into each item. While we acknowledge that our products may be considered a bit more expensive, it's important to note that they are meticulously designed in the United States, ensuring durability and longevity. Take, for instance, the Aspect, assembled in our small office space. We prioritize using high-quality components, avoiding cheaper alternatives to guarantee the lasting performance of our lights.

Designed to serve as long-lasting fixtures in your home or store, our lights undergo rigorous horticultural testing to meet our standards. Our commitment to quality is reinforced by generous warranties accompanying all our products, allowing for hassle-free replacements. Choosing us means investing in products that uphold a level of craftsmanship and small-business integrity that might be absent if sourced elsewhere.

Our pride stems from being a tight-knit team dedicated to the entire process – from design to sales. This ensures a personal touch and attention to detail that sets our lights apart in the market!

How do Soltech lights work?

Soltech's grow lights are the result of extensive research and development aimed at providing plants with the optimum spectrum and intensity of light for their growth and development, while also balancing it visually to create museum quality lighting for your interior spaces. Our light's unique spectrum mimics the photosynthetic characteristics of the sun by matching the ideal Chlorophyll A and B peaks among others by masking the appearance with a more aesthetic 3000k color temperature for ambient in-direct lighting.

We have mastered the art of PAR (Photosynthetically Active Radiation), PPFD (Photosynthetic Photon Flux Density), and PPF (Photosynthetic Photon Flux) with our grow lights. A complete guide to growing houseplants and DLI (Daily Light Integral) is on our website under the "Plant Guide" tab.
