1. Important Notice

- If an error code on the display does not go away after following the recommended instructions, please contact your retailer.
- This product is designed to be waterproof. However, it is highly recommended that you avoid submerging the display completely.
- Do not clean the display with a steam jet, high-pressure cleaner, or water hose.
- Please exercise caution when using this product.
- Do not use paint thinners or other solvents to clean the display, as these substances can cause damage.
- Wear and tear due to normal use/aging is not covered by the warranty.

2. Display Introduction

- Model: DP C240.CAN BUS
- The housing material is polycarbonate (PC); the display window is made of acrylic materials.
- The label marking is as follows:

Note: Please keep the QR code label attached to the display cable. It can be used to access possible software updates.

3. Product Description

3.1 Specifications

- Operating temperature: $-20\text{ }^{\circ}\text{C}$ – $45\text{ }^{\circ}\text{C}$
- Storage temperature: $-20\text{ }^{\circ}\text{C}$ – $50\text{ }^{\circ}\text{C}$
- Waterproof rating: IP65
- Storage room humidity: 30–70% RH

3.2 Overview of Functions

- Speed indicator (including real-time speed, maximum trip speed, and average trip speed)
- Imperial and metric unit options
- Battery capacity indicator
- Automatic lighting system
- Backlight brightness settings
- Support instructions

- Odometer (including single-trip distance, total distance, and remaining distance before recharge)
- BOOST function (with compatible controller)
- Assist level indicator
- Ride time indicator
- Motor power usage indicator
- Walk assist function
- Error message indicator
- Calories burned indicator (with compatible controller)
- Distance to recharge indicator (with compatible controller)
- Button vibration settings
- USB charging (5V and 500mA)

5. Buttons

6. Normal Operation

6.1 Power On/Off

Press and hold  (>2 seconds) to turn on the display (the screen should show the boot up logo). Press and hold  again (>2 seconds) to turn off the display.

The display will automatically power down if not used for the amount of time designated by the Auto Off setting.

6.2 Assist Level Selection

When the display turned on, short press  or  to change the assist level (the level of motor power provided by the controller), The lowest level is 0 (no assistance), and the highest level is 5. The interface looks like this:

Note: If the controller on your e-bike has the BOOST function, you can activate it by short pressing .

6.3 Ride Information

Short press the  button to cycle through settings information.

- For systems with a torque sensor, the settings list is as follows:
current trip distance (TRIP, mi or km) → total distance (ODO, mi or km) → maximum trip speed (MAX, mph or km/h) → average trip speed (AVG, mph or km/h) → distance until recharge (RANGE, mi or km) → energy consumption (CALORIES/CAL, kCal) → real-time power usage (POWER, W) → current trip time (TIME, min).
- For systems with a speed sensor, the settings list is as follows: current trip distance (TRIP, mi or km) → total distance (ODO, mi or km) → maximum trip speed (MAX, mph or km/h) → average trip speed (AVG, mph or km/h) → distance until recharge (RANGE, mi or km) → current trip time (TIME, min).

6.4 Backlight and Headlight

Press and hold  (>2 seconds) to turn on the backlight and headlight.

Press and hold  again (>2 seconds) to turn off the backlight and headlight. The brightness of the backlight can be changed using the Brightness setting. If the display is turned on in a dark environment, the backlight and headlight will be turned on automatically. However, if the backlight and headlight are turned off manually, they will need to be turned on again manually.

6.5 Walk Assist

The walk assist function should only be activated when the bike is stationary.

To turn on walk assist, short press the  button so that the  symbol appears. Next, with the  symbol displayed, hold down the  button. Walk assist should now be activated. The  symbol will flash and the bike will move at approximately 3.7 mph (6 km/h).

Releasing the  button will cause the motor to stop automatically, and if no action is detected within 5 seconds, the motor will automatically return to level 0.

6.6 BOOST Function

While riding, when your speed reaches 15.5 mph (25km/h), you can press and hold the  button (>2 seconds) to enter BOOST mode. The  indicator will flash and the motor will switch to maximum output.

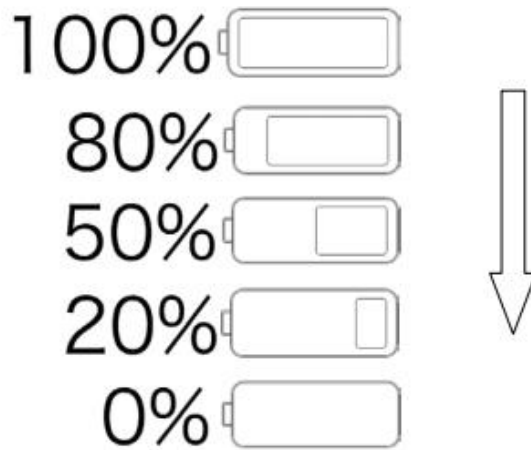

Releasing the button or otherwise using the display will deactivate BOOST mode.

Note: If the bike has not reached 15.5 mph (25 km/h), the BOOST function cannot be activated. Pressing and holding the  button (>2 seconds) under these circumstances will cause the display to power off.

6.7 Battery Capacity

The current battery capacity is displayed on the screen in accordance with the figure below.

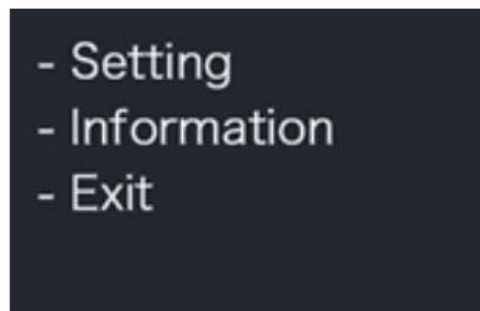

6.8 USB Charging

When the display is off, you can insert a USB adapter into the charging port and then turn on the display to charge the connected device. The maximum charging voltage is 5V, and the maximum charging current is 500mA.

7. Settings

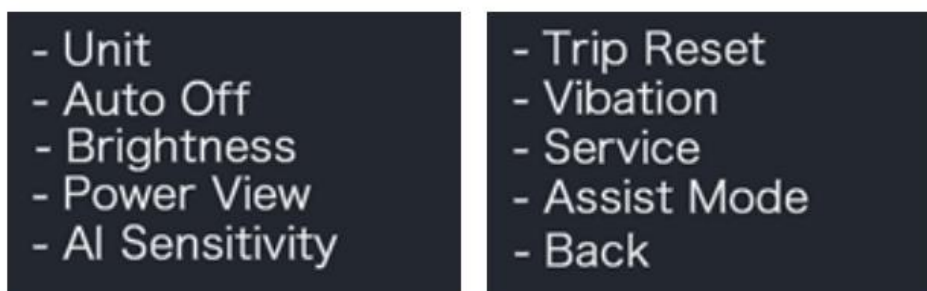

With the display on, press and hold the  and  buttons to enter the settings menu. Short press the  or  button to select Settings, Information, or Exit, then short press the  button to confirm.

You can press and hold the  and  buttons to return to the main menu.

7.1 Display Settings

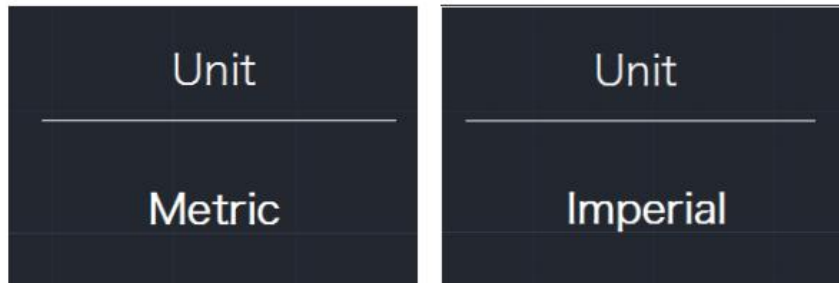

With the display powered on, press and hold the  and  buttons to enter the settings menu. Short press  or  to select Settings and short press  to confirm.

7.1.1 Unit Settings

Short press  or  to select Units, then short press  to enter the menu. Choose between Metric (kilometers) and Imperial (miles)

using the  and  buttons. Press the  button to save your changes and exit back to Settings.

7.1.2 Auto Shutoff Time

Short press  or  to select Auto Off, then short press  to enter the menu. Set the automatic shutoff time by selecting OFF or a number from 1 to 9 using the  and  buttons. Short press the  button to save your changes and exit back to Settings.

Note: OFF means this function is off, and 1 through 9 is the shutoff time in minutes.

7.1.3 Display Brightness

Short press  or  to select Brightness, then short press  to enter the menu. Select from 10%, 30%, 50%, 75%, and 100% with the  and  buttons. Short press the  button to save your changes and exit back to Settings.

Note: 10% is the weakest brightness and 100% is the strongest.

7.1.4 Power Usage Settings

Short press  or  to select Power View, then short press  to enter the menu. Select the power usage display mode as Power or Current with the  and  buttons. Short press the  button to save your changes and exit back to Setting.

7.1.5 Automatic Light Sensitivity

Short press  or  to select AL Sensitivity, then short press  to enter the menu. Select the level of sensitivity from 0 to 5 using the  and  buttons. Short press the  button to save your changes and exit back to Settings.

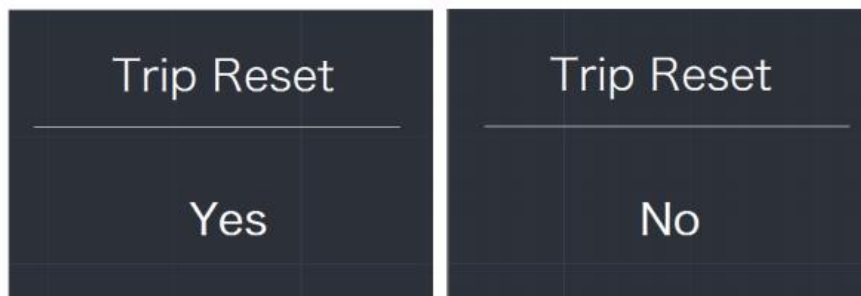

Notice: Level 0 means the automatic light sensor is off, 1 is the weakest sensitivity, and 5 is the strongest sensitivity.

7.1.6 Trip Reset

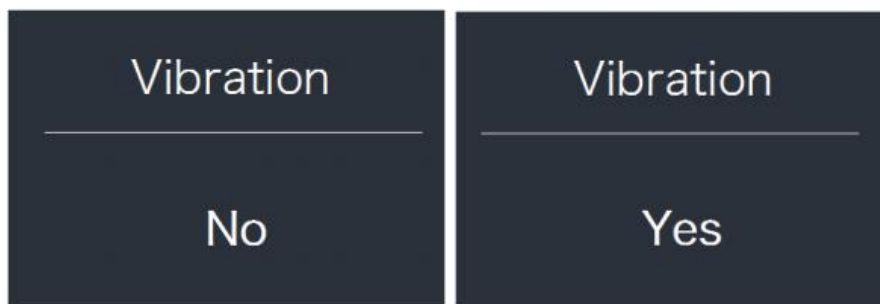

Short press  or  to select Trip Reset, then short press  to enter the menu. Select YES or NO (YES to clear, NO to cancel) with the  or  button. Short press the  button to save your changes and exit back to Settings.

Note: The current ride time (TIME), average trip speed (AVG), and maximum trip speed (MAX) will also be reset when you reset a trip.

7.1.7 Button Vibration

Short press  or  to select Vibration, then short press  to enter the menu. Select YES or NO (YES meaning button vibration is on, NO meaning button vibration is off) with the  or  button. Short press the  button to save your changes and exit back to Settings.

7.1.8 Service Indicator

Short press  or  to select Service, then short press  to enter the menu. Select YES or NO (YES meaning the service indicator is on, NO meaning the service indicator is off) with the  or  button. Short press the  button to save your changes and exit back to Settings.

7.1.9 Maximum Assist Level

Short press  or  to select Assist Mode, then short press  to enter the menu. Select a maximum assist level of 3, 5, or 9 with the  and  buttons. Short press the  button to save your changes and exit back to Settings.

7.2 Information

With the display powered on, press and hold  and  to enter into the settings menu.

Short press  or  to select Information, then short press  to confirm.

- Wheel Size
- Speed Limit
