

PSS-TSUB-T3A

10" Subwoofer Upgrade Kit for 2017-23 Tesla Model 3 Premium

PRODUCT OVERVIEW

Get ludicrous bass performance in your Tesla! The PSS-TSLA-T3A is a 10" sealed, pre-loaded subwoofer and power pack amplifier kit designed for plug-and-play performance for the 2017-2023 Tesla Model 3 with factory equipped premium sound system.

PRODUCT FEATURES

Boost Your Bass – Get more bass without compromising your usable space. The PSS-TSLA-T3A directly replaces the factory Tesla 160W 8" subwoofer in the rear trunk panel with a powerful, 200W 10" sealed subwoofer without cutting or modification. Paired with the ultra-efficient KTA-200M, this system delivers a dramatic increase in output and low-end clarity, giving your Tesla a noticeably more powerful and immersive audio experience.

Ultra-Efficient Power - Using Alpine's proprietary amplifier technology, Dynamic Peak Power (DPP), the KTA-200M intelligently doubles power during dynamic musical passages for ultimate efficiency with less than a mile range used at full volume. The lightweight yet durable hybrid carbon fiber cone material reproduces precision bass without adding additional weight to your Tesla.

Integration without Modification - Expertly crafted for the Tesla Model 3, the PSS-TSUB-T3A comes with everything you need for plug-and-play installation, including a pre-loaded and pre-tuned subwoofer enclosure, line output converter, Tesla-specific harnesses, and power wiring. Designed for seamless integration, the subwoofer is factory-matched in performance with full OEM function retention.

PSS-TSUB-T3A

10" Subwoofer Upgrade Kit for 2017-23 Tesla Model 3 Premium

OVERVIEW FEATURES

- Designed for 2017–2023 Tesla Model 3 Premium
- Direct-fit, sealed 10" subwoofer enclosure - replaces factory subwoofer in Premium Sound-equipped vehicles
- Not compatible with Tesla Base Audio system
- Includes Alpine KTA-200M Mono Amplifier
- Includes plug-and-play power harness and integration module
