

PINGuard™ 80 Series

Product Range

Hybrid 80 Series WU

The Hybrid is designed to protect against distraction attacks, while giving a good level of protection against skimming attacks. This protection can be increased by the customer covering the top half of the PINGuard.

Hybrid Narrow

With the same profile and attributes as the 80 series Hybrid, the Hybrid Narrow fits to most versions of the existing SelfServ and Persona ATMs.

T9+ 80 Series/T9+23/27

The T9+ gives the best protection by using the patented anti-camera lens to give exceptional levels of protection against skimming and distraction attacks. Combined with a highly durable vandal resistant body that can hinge to allow full accessibility.

Hybrid 80 series DU

Giving excellent protection for the SelfServ 84 Drive-up and SelfServ 88 ATMs. With a rigid body to protect against vandalism and a slightly lower profile to allow for car access while still protecting PIN entry.

T8+

With a similar profile as the 80 series WU the T8+ fits to earlier NCR Drive up ATMs.

Installation

All PINGuards can be fitted in seconds using VHB adhesive with the option of having them bolted if needed.
