Fab System Rail Assembly

Assemble as shown in pictures.
Rails and legs are inserted into the 4 corner fixtures as shown. Legs are optional and used only to adjust the height, as desired.

Screws and nuts will never need to be very tight. Initially, hand tightening is fine (hold the nut while screwing with screw driver). If additional tightening is desired this can be done after inserting the entire assembly into the whelping box.
Place assembly in whelping box. Adjust leg height as needed when puppies grow.
