Often times breeders will have already removed the liner by the time they attach the add-on room. However, this is not necessary and either way is acceptable.
Remove the screw (white arrow) from the corner brace attached to the front panel of the main box.

Notice the open sleeves on the front panel of the main box. These will be used to attach the add-on room.
If the liner is still being used, detach the Velcro straps (arrow 1) to allow access to the open sleeves (arrow 2).

Position add-on panel (represented in **blue**) by lining up the sleeves of the add-on panel and the open sleeves of the main box front panel. The sleeves of the add-on panel must lean toward the inward side of the room.

Then slide in a new post (shown in **red**) at arrow 2 to hold the add-on panel in place. Re-attach Velcro straps if needed.
Attach corner braces as shown. An extra long screw is provided for location 1. Repeat steps 1 through 3 on the opposite side of the main room front panel.
Configure the remainder of the add-on room as described in the Fab Box assembly instructions.
