April 1, 2015

Will Frey,

I have been testing the GFO oil additive with my fleet of trucks and my personal truck since the beginning of 2015. In 2014 I followed the instructions and added the GFO about 300 miles prior to an oil change and then changed the oil and added the GFO back into the trucks. I am testing this with my 1994-1999 Dodge Ram 2500 diesel fleet trucks mostly to see if this will help reduce the amount of oil they burn. I have 17 of these vehicles and every morning before our technicians start the day they check the oil in the truck because some of them burn oil. I know how much oil we used for this purpose 2014 and how many miles we drove in 2014. I will then compare how much oil we used in 2015 compared to how many miles we drove.

I also added the GFO to my 2006 Dodge Ram 2500 diesel and I paid very close attention to the MPG I was getting prior to adding the GFO and post GFO. Prior to GFO I was averaging 16.5 MPG which was a mix of city and highway driving. After adding GFO I now get 19.3 MPG on average. I have also noticed that my truck is more powerful and maintains speed with less throttle. So far I am impressed by how well the GFO is working and how much better fuel economy I am getting.

Sincerely,

Brad Wolfe
