v1.01

OVERVIEW

QUICK START

1. Place the Abby Bowl™ on a stable surface.
2. Remove cap and fill up the blue Water Storage Tank, securely replace the cap.
3. Place the Water Storage Tank into the Abby Bowl™.
4. Let the Abby Bowl™ begin to fill.
5. Plug in the Power Cord
6. A set of RED Lights may appear until the Abby Bowl™ is full, this is normal. Once ready to use, the Abby Bowl™ will have 2 BLUE lights, indicating Antioxidants are being produced.

NOTES

1. After the machine is powered on, hydrogen (antioxidant) will be produced every 15 minutes for 15 minutes.
2. The blue light indicates the start of the hydrogen production.

NOTES CONT.

3. When the blue light stops, it means it's in standby mode.
4. When the red light is on and the buzzer sounds, it means LOW WATER, please add water.

LED STATUS

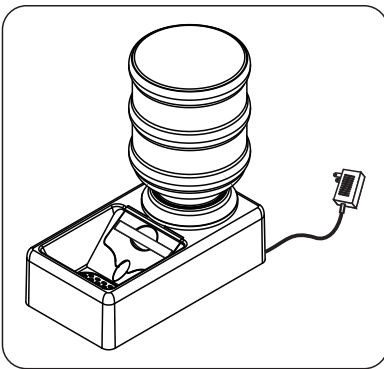

Blue Blinking LED: Antioxidants are being produced.

Blue Static LED: Standby.

Red LED and Buzzer Sound: Low Water.

FILTER INFORMATION

The filter removes chlorine and microorganisms and improves tastes. Please replace filter every 6 months. When replacing the filter, remove the old filter and insert the new filter downward in the same direction.

CLEANING

Turn off the power and pull out the filter before cleaning. Pour a solution of Citric Acid and Water into the bowl and soak for 10-30 Minutes. Rinse thoroughly with water. Note: When using citric acid to clean the bowl, please keep pets and children away.
