

## Assembling a Soft Stand

First, unroll the stand top.

Pull the black elastic cord out of the bottom of one of the wooden support arms. Poke the cord through the hole on the top side of one of the bases.

Fit the knot in the cord into the groove in the base so that it locks into place.

Make sure the base is turned 90 degrees / perpendicular to the wooden supports. Pull the other three cords through and lock them.

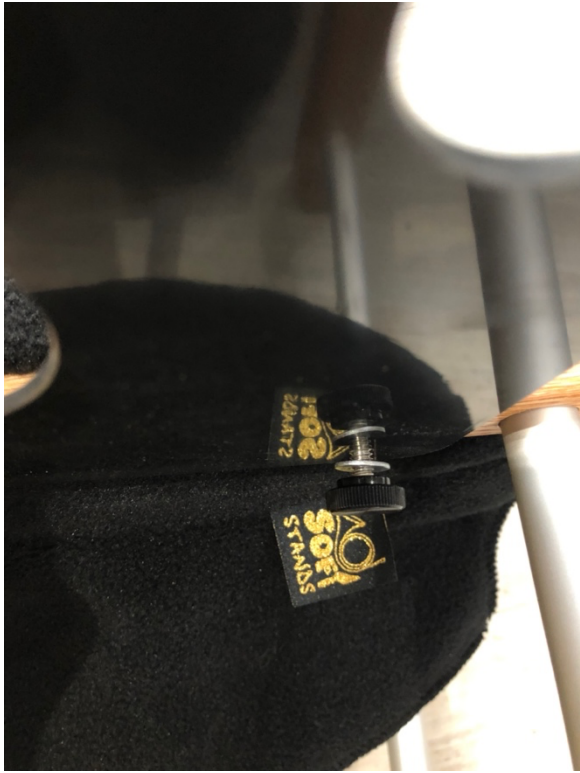

Twist the stand into upright position.

Turn the mute holder so the textured side is up and the two small slits line up with the screw holes on the bottom of the support arm.

Leave the washer on the underside of the mute holder, flush with the screw head. Screw the mute holder into place.

Enjoy your Soft Stand!
