Treat symptomatically

Hydrogen peroxide at concentrations (9-18%) is a strong oxidant.

Direct contact with the eye is likely to cause corneal damage. Ophthalmologic investigation should consider this and also the suitability of local corticosteroid therapy.

In the event of swallowing, the likelihood of systemic effects may preclude evacuating the stomach via emesis induction or gastric lavage. The release of hydrogen peroxide gas may cause stomach bloating.

A nasogastric or orogastric tube may be required for the reduction of severe distension due to gas formation.

The symptoms of lung oedema may not be apparent for some hours after exposure.
