- Mounting Trim: 4mm Coro or UV Stabilized Plastic
- Cat5 Cable (Required for Connection)

Customer Provided (If Applicable):

- PVC Pipe or EMT Conduit
- Clips, Brackets, Zip Ties, Etc.
- Other mounting material for home attachment

Prop Assembly and Connection

Roofline segments should be oriented with the first pixel on the left when viewed from an audience vantage point. Roofline segments can either be straight, over peaks, or along multiple curves in your home. Pixels can be at 1", 2", 3", or 4" spacing with the pixels in this package.

As long as the total number of pixels per roofline segment equals 100, no modifications to RGBPlus Sequences are required. Please scan the QR code to learn more about changing the number of pixels per roofline segment.

Sequence Use

To use these props with RGBPlus Sequences, the Pixie controller must be connected to the AuxB (computer) or Net 3 (Director) network. You must be using 5.6.8 or higher in order to use RGBPlus Sequences with a computer. Effects for these props are not included in RTG or YCM sequences.

To use with RGBPlus sequences, the Pixie4 should be given a base Unit ID of 82; The four Unit IDs for the four ports of this Pixie4 controller (and therefore your roofline segments of 100 pixels) must be 82, 83, 84, and 85, both physically on your controller and in your Preview, which correspond to ports 1, 2, 3, and 4 of your Pixie4.

Scan the QR code to learn more about using this package with RGBPlus Sequences, or about modifying the Unit IDs, Networks, or number of pixels per roofline for your own custom layout.
