

Boldenone Undecylenate (equipoise) Or Eq | Equipoise (Boldenone Undecylenate) - Evolutionary.org

History of Boldenone Equipoise, also known as Boldenone Undecylenate or EQ, is a veterinarian steroid developed by CIBA, to be a form of long-acting injectable dianabol. The intended use was in the horse and cattle industry. In general, EQ comes in an oil suspension that can be injected into animals every 6 weeks. Equipoise (Boldenone Undecylenate) is a structurally altered form of testosterone. It is a very slight change in an added double bond at the carbon one and two position. This double bond greatly reduces the hormone's androgenicity, as well as estrogenic nature.

Boldenone Undecylenate - Equipoise: Injections, Dosages ...

One such remedy is Boldenone Undecylenate (its second name is Equipoise). Many know this as EQ. This is a fairly effective drug, the ultimate goal of which is to recreate the divine (pumped to perfection) body of any athlete. Extremely useful information about Boldenone Undecylenate, even for professional "pitching"

Boldenone Undecylenate - Equipoise: Injections, Dosages ...

Equipoise (Boldenone Undecylenate) Most people are unaware of the fact that Equipoise is a Veterinary grade steroid that's administered to horses, to allow them to maintain lean muscle mass. The word Equipoise is derived from the term Equestrian, which means - no prizes for guessing, horses.

The attached ester, Undecylenate, is a slow release ester that causes Equipoise to continue being released into the body for up to three weeks after an injection. It also takes several days for the maximum blood level to be reached after you inject Boldenone. EQ is one of the few steroids that is used solely for veterinary purposes. [reference](#)
