## **Proviron, Arimidex, Clomid, Nolva, HCG HELP!!**

A friend of mine from the gym claims that a combination of Human Chorionic Gonadotropin (HCG) and proviron is better for post cycle therapy (pct) than nolvadex or clomid. I have always used the Nolvadex post cycle therapy (pct). day 1: 60 mg ED day 2-8: 40 mg ED day 9-30 20 mg ED arimidex or nolvadex for post cycle. Hcg necessary? what is the dosage for the pct. I'm currently on sust250mg for 10 weeks now on the 8th week. Do i need hcg? my nuts seem to shrunk > 17-Jan-2004, 11:13 PM #2

### **Arimidex, Nolvadex and Proviron - Questions About Steroids ...**

during the cycle you should use 0.25mg arimidex and 10-20mg nolva throughout the entire cycle including the Post Cycle Therapy (PCT). Or you could use one pill (25mg) Proviron and 10-20mg Nolvadex instead. There si no reason to use all three so choose either proviron+nolva or arimidex+nolva.

I am going to use arimidex and HCG. I have read that Proviron and Nolvadex are very good together for hardening physique. Below are my stats and what I am planning. 31 6'5 260 15-18% body fat currently doing Englands Ketogenic Diet with goal to get down to 225 with 9-12% bf. Goals: To gain quality muscle, vascularity and hardness only. [straight from the source](#)

## Proviron Clomid Nolvadex Pct - Proviron Bayer Preco ...

1. Aug 28, 2017. #1. I plan on using clomid 50mg ED and proviron starting at 50mg ED and continuing to 100mg ED after the first week. my goal is to dry up a little. i also read at many forums that clomid 50mg or 25mg every day raises testosterone. Not anything superior to steroids but its like a good test booster.

## Proviron Clomid Nolvadex Pct - Proviron Bayer Preco ...

The proviron or arimidex will actively reduce estrogen while the Clomid or Nolvadex will solve your ongoing problem straight away. This way, when use is discontinued there is no immediate rebound. So which one should you use? Well personally, I'd have to say Nolvadex. Both as an on-cycle anti-estrogen and a post-cycle therapy.

Proviron is an estrogen antagonist that stops the aromatising or conversion of testosterone into estrogen. It is very different from Timoxifen (Nolvadex) in that it does not block the estrogen receptor sites, but actually stops the conversion in the first place. This means that water retention and gynecomastia is successfully blocked. [recommended reading](#)

## Post cycle therapy (pct) battle: proviron/hcg vs. nolvadex ...

- Proviron instead of Clomid/Nolva PCT

- Proviron + Clomid - [AnabolicMinds.com](http://AnabolicMinds.com)
- arimidex or nolvadex for post cycle.Hcg necessary?
