Photo Booth Setup Guide

1. UNPACK
Remove all of the items from the box.

2. SET UP THE TRIPOD

Set up the tripod with the legs 2' apart and raise the neck to your desired height. Then tighten both knobs.

IMPORTANT NOTES

1. [SUPER IMPORTANT] After taking a photo, if you click on the "X" the photo will not be saved!
The photos are only saved to the gallery when the user approves and sends to email or text message.

2. Your (2) power packs come fully charged. Each will give you 3-4 hours of run time. When you see the indicator lights running low, change over to your backup power pack and plug the original into a power outlet to recharge it. Charging the pack that is not in use will give you unlimited run time.

3. Take test photos! Make sure everything looks good and functions properly *before* the start of your event.

4. If you do not have wifi, the photos will be stored in an offline queue. The moment the device connects to wifi, the queue of photos will be sent.
