Enhance your viewing experience with the OPHDST100, 254cm Laser Projector Screen. Whether you are trying to impress a new client or want the full experience of a movie, this projector screen is perfect solution.

Users can set up in seconds due to its speciality designed slim brackets for an easy click on installation.

The Ultra-Thin Frame Projection Screen is made with the thinnest visible bezel frame available in the market today. The Projector Screen is uniquely designed to resemble a 254cm 4k tv. The Thin Edge Frame uses sturdy extruded aluminum alloy frame with 1.2cm edge border. The screen offers maximized viewing, making this an excellent addition to both a perfect home theater setup and commercial applications.

With special optical sawtooth structure, the anti-light screen can absorb 93% ambient light, bringing your images to life! Unlike traditional projection screen, the OPHDST100 projector fabric presents images under bright light. With Gain of 0.8 and viewing angle of 160 degrees, the audience can see clear and vivid images in all directions. Compared to traditional matte white screen, its contrast has been lifted by 10 times.

With its easy and adjustable fabric spring system, the Fixed Frame Screen is perfectly and permanently tensioned, ensuring that the screen is as flat and level. Watch as your viewing experience soars to new heights of enjoyment!
