- High Quality Matte White Fabric Projector Screen
- Housing Material: Aluminum Alloy
- Eco-Friendly Material Projector Screen

Whether you want to bring the excitement of the movie theater in the comfort of your own home or give a lasting impression on your presentation, the OPMAN120 is the screen projector for you! This retractable screen is the ultimate accessory for entertainment or business.

With 304.8cm diagonal of screen, the drop-down projector screen can be seen from the back of a classroom, conference room, or home theater. The wide viewing angle allows each audience member who are not directly in front of the projector screen to still see. The black border and high-quality matte white screen reduce glare, allowing every television show, movie, or internet video to look crisp.

The OPMAN120, pull-and-release systems allows you to lower the screen to the desired height and lock it into place. The pull down and roll up screen can be installed on the wall or on the ceiling, for a convenient, space-saving solution for any media needs. You can also retract the screen when not in use. Engineered with aluminum alloy housing, the screen is protected from wrinkles and damages. The projector screen is made with a high-quality material and easy cleanable with mild soap and water.

Enhance your viewing experience with the OPMAN120 Manual Projector Screen today!
