1 Preparing the door

Draw a level 3" (76mm) center line on both sides of the door. The standard height for a handle set is 36" (914mm) from the finished floor. Please adjust the deadbolt to your preferred height. Fold the template over the edge of the door, and mark at a backset distance of either 2 3/8" (60mm) or 2 3/4" (70mm) to determine the center-point of the holes. Bore a 2 1/8" (54mm) hole half way through the door on each side to prevent splintering of the door. Drill a 1" (26mm) hole on lock edge of the door where the center is marked. Cut out a 2 5/16" x 1" x 1/8" (58x26x3mm) rectangle to a depth of 1/8" (3.5mm).

2 Installing the deadbolt latch

The deadbolt latch can be adjusted to 2 3/8" (60mm) and 2 3/4" (70mm). Install latch (3) using wood screws provided (4). Please assure that the screw holes of the latch are at the bottom part of the latch.

3 Fixing the cylinder

Insert the cylinder (1) through the collar (2) in to the latch (3). Please assure that the cylinder tailpiece (10) is inserted vertically. Place the subrose (5) on the door. Attach the two pieces by inserting the machine screws (6) through the holes of the subrose and the holes of the deadbolt latch in to the threaded holes of the cylinder.

2 1/8 " (55mm)	2 3/4" (70mm)
2 1/2 " (65mm)	3 3/4" (70mm)

4 Attaching the cover

Place the cover rose with the thumbturn (7) onto the tailpiece of the cylinder and push the rose gently up to the subrose (5). Press the coverrose (7) on the door, first at the top and then at the bottom, so that the parts click into place audibly. Test the function before closing the door.

5 Preparing the frame

Mark the position of the latch tongue at the door frame for the location of the strike plate. Prepare the frame according to the measures below.

6 Install Strike plate

Install dust cover (9) and strike plate (8) using supplied wood screws (4).
