

PLANTING INSTRUCTIONS

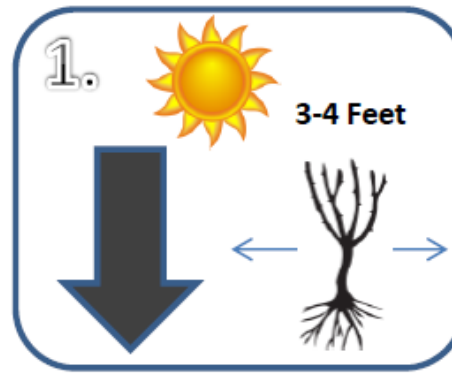

Congratulations and thank you for purchasing own-root roses from Heirloom Roses! To ensure your roses grow healthy and beautifully, please follow our planting instructions.

Improper planting may not establish your rose correctly and may void any potential warranty claims.

If you live in a hot climate, be sure to gradually acclimate your rose to your environment or add shade until adjusted. For more information on rose growing and care, please visit our resources at www.heirloomroses.com.

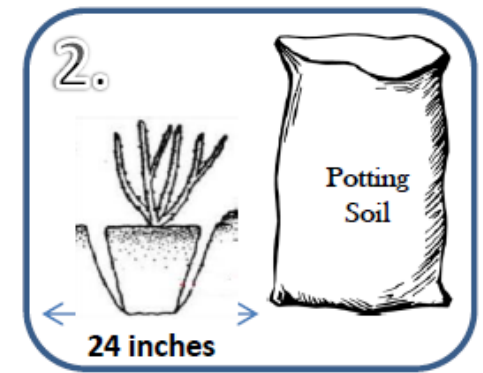

We guarantee that our roses are healthy, grown on their own roots, and true to variety. We are so confident in our roses that we warranty them for one year from the date received. View the full conditions of our guarantee at: www.heirloomroses.com/info/about/guarantee/.

PICK THE LOCATION

- Find a spot with at least 6 hours of sun per day and good drainage.
- Be sure your location is at least 3-4 feet away from other plants. Large shrubs or ramblers need about 6-8 feet of space.

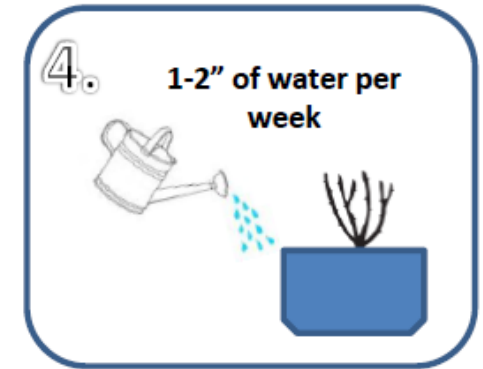

PREPARE

- Dig a hole that is at least 24" wide and 24" deep.
- Remove the soil from the hole and mix with organic potting soil that **DOES NOT** contain granular fertilizer. Amend with peat moss, Heirloom Roses Aged Cow Manure and bone meal per package instructions.

PLANT

- Remove rose from container. Use soil mix from step 2 to plant rose in the center of the hole about 1" deeper than the soil line in the pot. **DO NOT** use granular fertilizer the first year as it may burn the roots and kill the rose.
- If planting in a pot, be sure your selected rose is suitable for it first.

PROVIDE

- Roses love water, but hate wet feet. Give them at least 1"-2" or the depth of a tuna can of water per week throughout the growing season.
- Newly planted roses should be watered 2-3 times per week until established. Water at the base, not overhead to discourage potential disease.
