

Georgian Bay Grills

PORTABLE STAINLESS STEEL NESTING GRILL

Model: PCGRILLSS

Thank you for purchasing our Portable Nesting Grill!

Your Nesting Grill has been designed using high quality stainless steel for years of enjoyment.

Powered by all types of lump charcoal, this well-constructed beauty packs down small but offers a full 40cm (15.7") diameter cooking surface!

Set on any non-flammable surface (such as sand, stone, or on the ground) and you've got the perfect solution for camping, picnics, shore lunches, or tailgating!

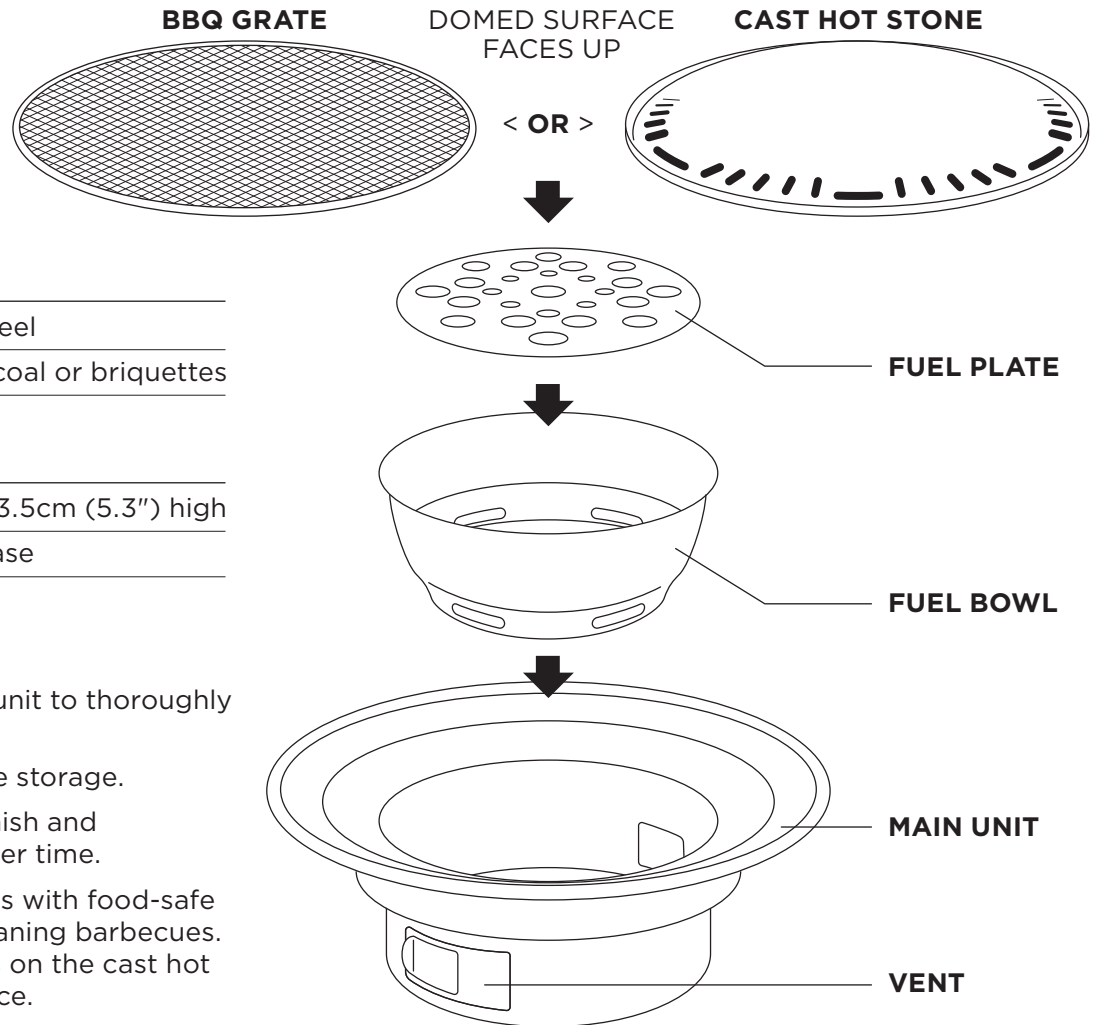

Perfectly placed lower air venting and a dedicated inner charcoal pit means this grill lights up and gets to temp very quickly, is very easy to set up and take down, and is light enough to take anywhere!

Includes:

- TWO cooking surfaces: cast hot stone surface & traditional bbq grate
- Convenient lifting tool

THIS PRODUCT IS FOR OUTDOOR USE ONLY

ASSEMBLY & USE

SPECIFICATIONS

Material	Stainless steel
Fuel	Lump charcoal or briquettes

DIMENSIONS

40cm (15.7") diameter x 13.5cm (5.3") high
23.5cm (9.3") diameter base

CARE INSTRUCTIONS

After each use, allow the unit to thoroughly cool, then empty.

Wipe the unit clean before storage.

You can expect some tarnish and weathering of the steel over time.

Clean the cooking surfaces with food-safe products intended for cleaning barbecues. Avoid using metal utensils on the cast hot stone to protect the surface.

ALWAYS USE CAUTION WHEN OPERATING

Use outdoors only, positioned on a flat, stable, non-flammable surface, such as the ground, rock or sand. Keep vent holes clear.

Keep any flammable objects at least 90cm (35.4") away from the unit while hot.

Do not leave the unit unattended while in use.

Assemble the unit as shown above. Place your starter and fuel on top of the fuel plate inside the fuel bowl.

Do not use liquid accelerants – we suggest using solid or gel starters.

Open all vents and ignite the fuel. Once the fire is established, control the intensity of the fire by adjusting the vent sliders (Careful, outer surfaces will be HOT). More open the vents = more air allowed into the fuel bowl = more intense fire.

Place one of the cooking surfaces on the main unit using the lifting tool. The domed surface faces up. Once heated, you're ready to cook!

Keep children and pets away while in operation: Outer surfaces will be HOT.

When finished, close all vents and allow the fire to burn itself out. Do not handle the unit until it is cool.

After every use, when the unit is cool, clean out the ashes from the fuel bowl.
