

Unwinding, simplified.

Retract, Relax, Repeat.

Retract and relax in an instant.

Upgrade to truly automatic pool cover maintenance...

The way pools were meant to be enjoyed.

Extends and retracts in less than a minute with the push of a button for easy, one-person operation.

Offers the hands-free precision of built-in covers without costly or invasive installation.

Saves energy costs by retaining heat and preventing water and chemical evaporation.

Solar covers last longer when not being dragged or pulled across the pool by tracks, ropes, or tethers.

Designed for new and existing swimming pools of various shapes and sizes.

No cranking devices

No permanent track systems

No ropes or pulley systems

No dragging your cover

What makes APR[®] different?

We make the only solar cover rollers with truly automatic capabilities for covering and uncovering your pool hands-free, without the tracks.

The answer is *simplicity*.

Solar covers and thermal blankets are the easiest and most effective way of saving energy by reducing evaporation and maintaining the temperature of your swimming pool. But dragging a cover on and off the water is laborious and time-consuming. So, what are your options?

Most automatic pool covers require rope and pulley systems, or even manual cranking. Custom options are expensive and involve permanent tracks or under coping that run the length of your swimming pool. In a market with a dizzying number of options, and a surprising lack of simplicity... we set out to design pool cover rollers that are uncomplicated, easy to use, and as automatic as advertised. APR's *truly* automatic cover systems let you unwind without the hassle, so you can get the most out of your swimming pool.

Maintain the aesthetics
of your backyard with
upmost ease.

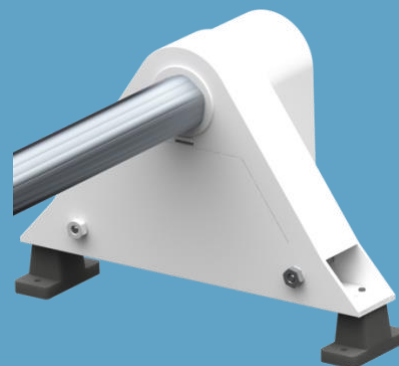

Sleek and simple design, effortless appeal.

Traditional cover rollers are bulky and complicated, while automated covers use permanent tracks that detract from the overall beauty of your pool deck. Our cover systems are different.

The Auto Pool Reel® and the Auto Pool Roller keep your cover out of the way when not in use, without the unsightly equipment that's typically required of automatic cover systems. A modern silhouette and compact design will ensure that your deck remains pristine and uncluttered for those poolside views you've always envisioned.

The Auto Pool Reel®

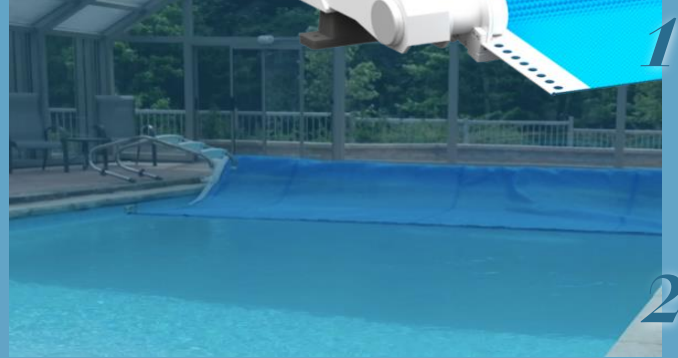

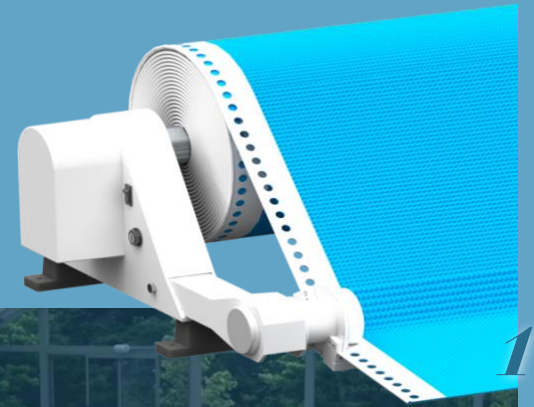

The Auto Pool Roller

The Auto Pool Reel®

Automatic Covering & Uncovering

- 1** The reel's unique design and patented edge-guide arms are what make the Auto Pool Reel® the only trackless cover system to unwind *and* retract the cover by itself.
- 2** With the push of a button, watch as the cover gracefully deploys onto the pool by itself.
- 3** Magnetic sensors tell the cover when to stop. No pulling, tugging, re-adjusting, or any manual assistance is ever required.
- 4** A safety key is an essential part of the reel's design. The cover will not deploy onto the water without it. After the key is inserted, a quick flip of a switch is all that's needed to cover and uncover your pool.
- 5** With another push of a button, watch as the cover winds itself back onto the reel and adjusts itself along the way for perfect alignment and smooth unwinding/retracting every time.

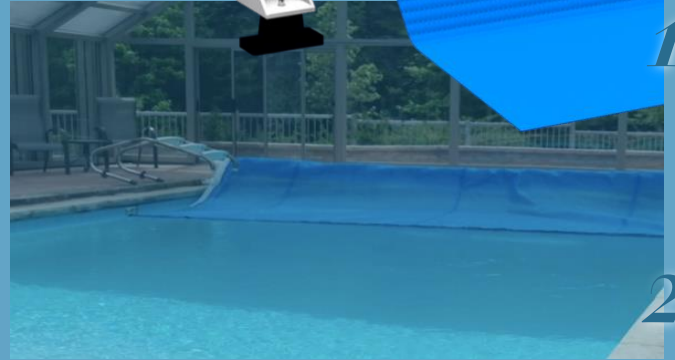

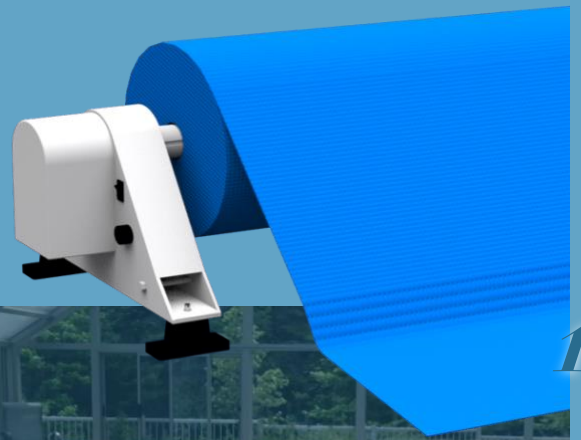

The press of a button is all it takes.

When you think automatic, you probably envision a product that operates all on its own. However most automatic pool covers actually require manual assistance. The Auto Pool Reel®'s unique design offers the same fully automatic, hands-free operation as costly built-in pool covers. No other automatic roller allows you to cover and uncover your pool so effortlessly.

The Auto Pool Roller

Semi-Automatic Covering & Uncovering

- 1 Intelligent one-way rotation technology makes covering your pool far easier than other automatic cover rollers.
- 2 The roller deploys and retracts your cover automatically with little assistance. No ropes, tethers, or extras are needed to direct the cover.
- 3 With the push of a button, the roller engages. A gentle hand is all that's needed to guide the cover onto the water.
- 4 With another push of a button, watch as the cover winds itself back onto the roller. Unlike the Auto Pool Reel®, our roller requires a helping hand here and there as the cover winds up.
- 5 An adjustable dial lets you set the speed of the roller when retracting so that any adjusting that may be needed can be done at your pace of choice.

Smart unwinding at the press of a button.

For easy unwinding that necessitates a human touch only where necessary, our semi-automatic pool cover roller is equipped with technology that makes retracting and relaxing a breeze compared to other automatic cover rollers. The Auto Pool Roller operates like most other automatic covers you'll find on the market but with a simpler interface and an intuitive touch that never overcomplicate things. *For a completely automatic and hands-free experience, see our Auto Pool Reel®.*
