

GM BRAKE LINES

6mm ISO/BUBBLE FLARE

Since 1990 GM has used non-standard brake lines on some production vehicles. These non-standard lines are often confused as being a 1/4" diameter tube with an ISO/Bubble flare and a metric fitting. This brake line is actually a new 6mm tube with specialized tube nut. The following are the actual specifications:

As these vehicles age, replacements of these new lines have increased accordingly. These lines are not commonly available through the OE dealer and are generally very expensive. However, AGS now offers a complete assortment of 6mm replacement brake lines. 6mm brake lines are available in Poly-Armour® as well as standard steel.

* Poly-Armour® 6mm Brake Lines

Part No.	Description	Quantity
PA-708	6mm x 8"	5 lines per tube
PA-712	6mm x 12"	5 lines per tube
