

Where Innovation & Sustainability Meet

April 12, 2019

Subject: - Penetrants and Curing Aids LEED® Product Information

At RainguardPro we have long adopted strict environmental standards in all our products.

- None of our products produce volatile organic compounds that exceed the strictest air emission standards in the country - the South Coast Air Quality Management District.
- Many of our products were used as an example of how high-performance coatings can produce uncompromising results while lowering air emissions. See AQMD board notes <http://www.aqmd.gov/hb/2003/0312min.html>
- In addition, none of our products contain chemicals that are known to cause cancer.

Over the past year, we have moved aggressively to ensure our products meet LEED credit requirements. The following information will provide the basis for LEED credits that are available on your project.

MR Credit 5.1 REGIONAL MATERIALS

RainguardPro certifies that all Color-Lok products are produced in our Huntington Beach, CA facility. Projects that are within a 500-mile radius of this location, are considered to be locally produced material and will provide a 1 point credit.

EQ Credit 4.2 LOW-EMITTING MATERIALS

RainguardPro certifies that all Color-Lok products meet the required VOC requirements for Paints and Coatings and will provide a 1 point credit.

Working together we can achieve our business goals and at the same time succeed in improving human and environmental health: sustainable site development, water savings, energy efficiency, materials selection, and indoor environmental quality.

Sincerely,
Claude Florent
President
