The duration of the increase in growth hormone levels may play a role in determining the magnitude of the effects. A relative saturation of the effects of Saizen at high doses is probable. This is not the case for glycaemia and urinary C-peptide excretion, which are significantly elevated after high doses (20 mg). Just bought the Saizen 150 iu, 5mg kit.. Im seeing on here that both it could be real or fake. It has spanish writing on the box and a english insert inside.. Hologram sealed the box before i open it..
