Preventing leakage of liquids while on-the-go

To prevent leakage of liquids from the Twist'N'Blitz Blending Bottles while blending, ensure that the rubber gasket on the inside of the Blade Assembly is securely in place and is in prime condition - i.e. is not deformed, broken or obstructed by food debris. Please also ensure that the Blending Bottle has not been overfilled passed the 'MAX 800ml' mark.

Be sure to screw the Blade Assembly on tightly, all the way, until there is significant resistance and the unit will not screw in any further.

Before attempting to use the Twist'N'Blitz Blending Bottles on-the-go, it is important to ensure that the rubber gasket on inside of the Lid is securely in place and is in prime working condition - i.e. is not deformed, broken or obstructed by any food debris. Please also ensure that the Blending Bottle has not been overfilled passed the 'MAX 800ml' mark.

Following this, tightly screw on the Lid to the Blending Bottle, all the way, until there is significant resistance and the lid will not screw in any further.

Once tightly sealed, the constructed Blending Bottle and Blade Assembly should be leakproof and good to go for all of your blending needs.

Once tightly sealed, the constructed Blending Bottle and Spill-proof Lid should be leakproof and good to go to fuel you for your day ahead.
