

Making a Chenille Stem Christmas Tree

Instructions

You will need:

- A 5cm wooden cone 2.5x5cm
- 2 sparkly chenille stems
- Hot Glue Gun

This is a simple way to make a little Christmas Tree that is the PERFECT size for my Dicken's Village Series!

I like using glittery green tinsel stems for it, but it would also look great in any other sparkly stem - think of iridescent white or gold, or even trying to combine two colours in one cone!

The cones can be purchased online through a craft supplier or even on Amazon, just keep in mind the size I specify.

And lastly, if you want to glitz it up you could glue on a little star at the top or add on a mini string of beads!

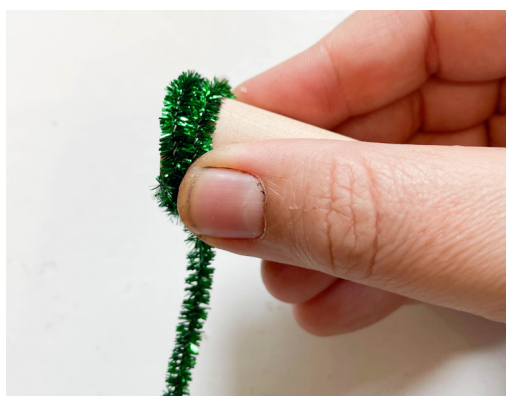

Step 1

Starting at the wide end of the cone, add a bit of hot glue, and glue the end of the chenille stem in place.

Step 2

Continue to glue and wrap the chenille stem all the way up the cone. You will need two chenille stems to make it all the way!

Step 3

Trim the excess chenille stem.
