

# Tea Plant

**Botanical Name:** *Camellia sinensis*

All tea - White, Green, Oolong, Black and Pu Erh originates from the leaf of the Tea plant, *Camellia sinensis*. It is the variation of the processing of the tea leaves that gives us so many different types of tea to enjoy, each with their own unique flavor and wonderful traits. These processing methods have been refined over hundreds, and in some cases thousands of years. Honed to capture the tea's ultimate characteristics, which are shaped by the climate, soil type, altitude and timing of the harvest. When we talk about tea, the African continent is royalty and the fourth largest contributor to the world tea market with a production of about half a million tons of tea annually. Commercial tea cultivation dates as far back as the late 1800s with Malawi being the first followed about two decades later by Africa's largest tea producer today, Kenya. Africa's prime tea growers are Kenya, Malawi, Tanzania, Rwanda, Uganda, Zimbabwe and South Africa.
