

**Production Bulletin;**

**Laser engraver makes "eye-popping" improvement.**

Say goodbye to eye squinting and second-guessing.

Tap Associates, Inc adds laser engraving to our product production, making it easier to identify and reorder Self-Locking Tap Extensions in our ANSI and NPT lines.

Photo shows the laser example with the item #, size, length and brand clearly visible on the

smallest outer diameter in our line up. Both methods (stamp alongside laser) will appear on current stock as we work to transition to new production.
