

Certificate of Enrollment

Congratulations and welcome to the CrunchLabs' Build Box! I'm Mark Rober and for over a decade I've been making monthly videos on YouTube where I use my engineering skills to make some ridiculous builds while having fun and teaching some science at the same time. And while you can learn stuff by passively watching a YouTube video, there's just no substitute for hands-on experience which is why every month you'll be right there, in the trenches, constructing your own build alongside me.

My goal with CrunchLabs is to help you think like an engineer. That means, thinking critically and breaking down a problem into manageable steps. Thinking like an engineer helps you become a better soccer player, piano practicer, or math student! It's helpful because it makes you resilient. It teaches you that it's not only okay, but it's important to fail a bunch in order to hit that big breakthrough. That's why it's called CrunchLabs. It means that we can crunch and break and fail, so we can learn as fast as possible.

I should also mention that CrunchLabs is a real place. And each month when you open your box that comes in the mail, you have a chance to find the platinum ticket. If your box has it, that means you and your family get to come out and visit me and my team for a day!

Thank you for embarking on this year-long journey with me! I feel like this is a culmination of all my life experiences to this point and I'm so stoked to finally share it with you.

Sincerely,
Mark Rober

A handwritten signature in blue ink that reads 'Mark Rober'.
