**Biokit Rapids**

As a market leader in serology testing, biokit provides diagnostic screening kits of unmatched quality and value. Products designed with accuracy and convenience, supported by the highest level of technical and customer service, ensure your lab can test with confidence.

- Mononucllosis
- Syphilis
- Staph Aureus
- Herpes type 2 virus
- Rheumatoid Factor
- Rubella virus
- Anti-Streptolysin O
- C Reactive Protein

---

**Serology Products for Accuracy and Convenience**
HSV-2 Rapid Test
As the market leader in latex Mono testing, biokit provides a rapid, convenient kit for the detection of heterophile antibodies in serum or plasma. Our highly purified antigen ensures accuracy and aids in the diagnosis of infectious mononucleosis. Both Mono kits can identify positive patients under the age of 18.

HSV-2
- Serum and whole blood specimen
- 7-10 minutes results time
- Internal control in device
- Sensitivity and specificity compared to western blot

Monogen/Color Mono
As the market leader in latex Mono testing, biokit provides a rapid, convenient test for the detection of heterophile antibodies in serum or plasma. Our highly purified antigen ensures accuracy and aids in the diagnosis of infectious mononucleosis. Both Mono kits can identify positive patients under the age of 18.

Monogen
- 94% specificity
- 99% sensitivity
- 3 minutes results time
- Dropper control vials

COLOR-Monogen (color enhanced)
- 95.8% specificity
- 97.9% sensitivity
- 2 minutes results time
- Dropper control vials

Rheumatoid Factor, Anti-Streptolysin O, C Reactive Protein

Rheumajet RF
- 10 IU/mL sensitivity
- 2 minutes results time
- Dropper control vials

Rheumajet ASO
- 200 or 100 IU/mL sensitivity
- 2 minutes results time
- Dropper control vials

Rheumajet CRP
- 6 mg/L sensitivity
- 2 minutes results time
- Dropper control vials

Rubella latex kits determine the immune status of patients by detecting IgM and IgG anti-rubella virus antibodies in serum. Rubajet’s non-dilution procedure provides ease of use and quicker results. Diagnosis of recent or current infection can be determined with both rubella kits.

Rubajet
- 10 IU/mL sensitivity
- 98.6% specificity
- 5 minutes results time
- Dropper control vials

Rubagen
- 1-2 IU or 10-20 IU/mL sensitivity
- 96.1% specificity
- 8 minutes results time
- Dropper control vials

RPR
- Liquid controls
- Screw top antigen vial
- Serum or plasma sample types
- 8 minutes results time

Rheumajet RF/ASO/CRP
As a market leader in latex technology, biokit provides rapid screening kits for Rheumatoid Factor, Anti-streptolysin-O, and C Reactive Protein. These tests offer qualitative and semi-quantitative testing procedures. Titer controls of specific values can be purchased separately.

Rubella
Rubella latex kits determine the immune status of patients by detecting IgM and IgG anti-rubella virus antibodies in serum. Rubajet’s non-dilution procedure provides ease of use and quicker results. Diagnosis of recent or current infection can be determined with both rubella kits.

Rubajet
- 10 IU/mL sensitivity
- 98.6% specificity
- 5 minutes results time
- Dropper control vials

Rubagen
- 1-2 IU or 10-20 IU/mL sensitivity
- 96.1% specificity
- 8 minutes results time
- Dropper control vials

Syphilis
- Liquid controls
- Screw top antigen vial
- Serum or plasma sample types
- 8 minutes results time

SELECT RPR
A non-treponemal antibody test
SELECT RPR is a rapid screening test for the detection of reagin antibodies associated with Syphilis. Our quality formulation enhances readability, ensuring accurate test results. This kit is designed for ease of use and includes all components necessary for syphilis testing.
