

TWO-STROKE TUESDAY: PRECISION CONCEPTS KX125

A very sweet KX125 built by Phil Valdez the Precision Concepts Race Team head mechanic is front and center on this weeks Two-Stroke Tuesday brought to you by Boyesen. We don't stop there 2-Stroke Hardware has products from Engine Ice, FMF and Nitro Circus . If you like Kawasaki's don't miss this weeks 2-Stroke theater and fans of the GOAT click the exclusive link at the bottom of this post you won't be disappointed .

Phil has spent lots of late nights in the Precision Concepts race shop working on this KX125.

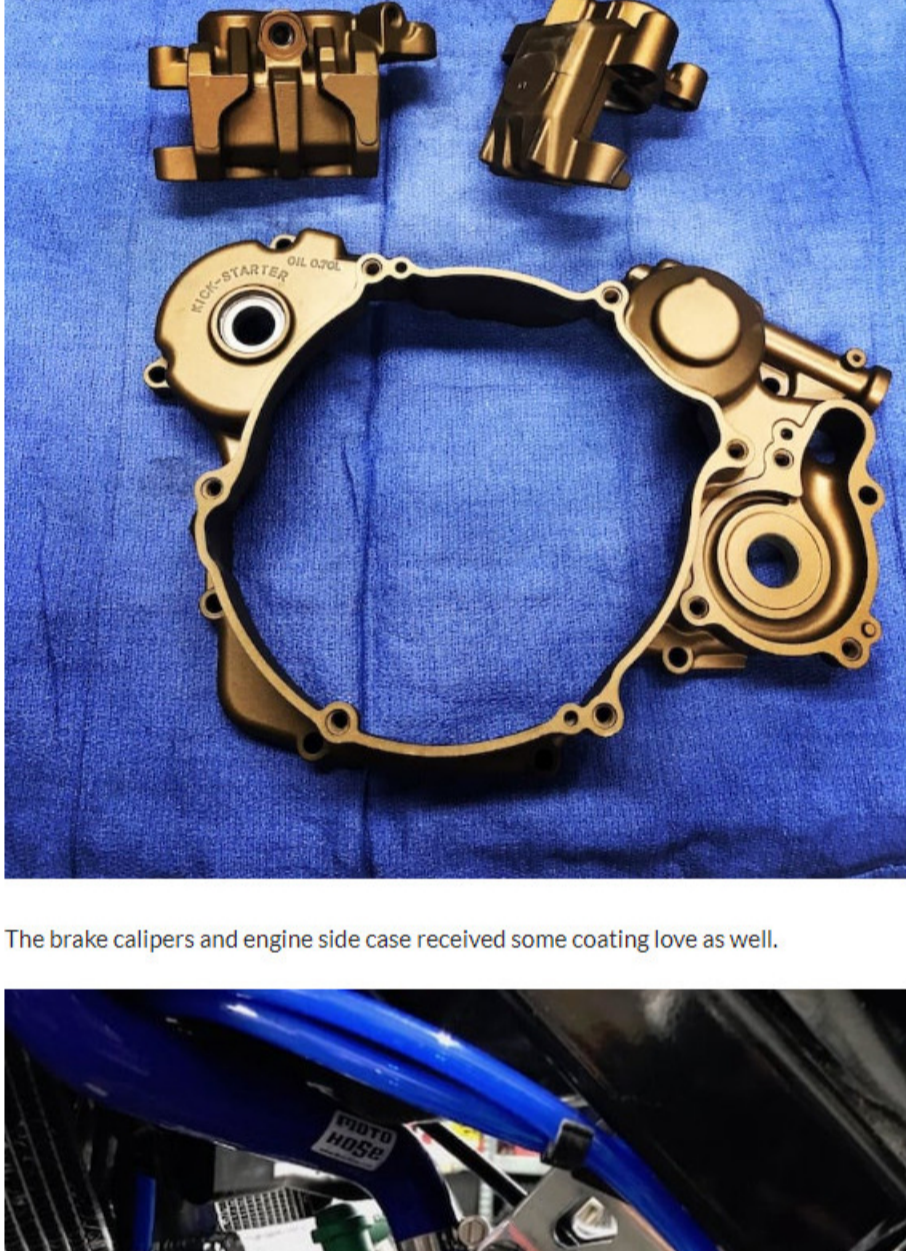

Phil being the head race team mechanic for Precision Concepts Racing he is no stranger to framing a bike. His KX125 got the same treatment as the teams race machines.

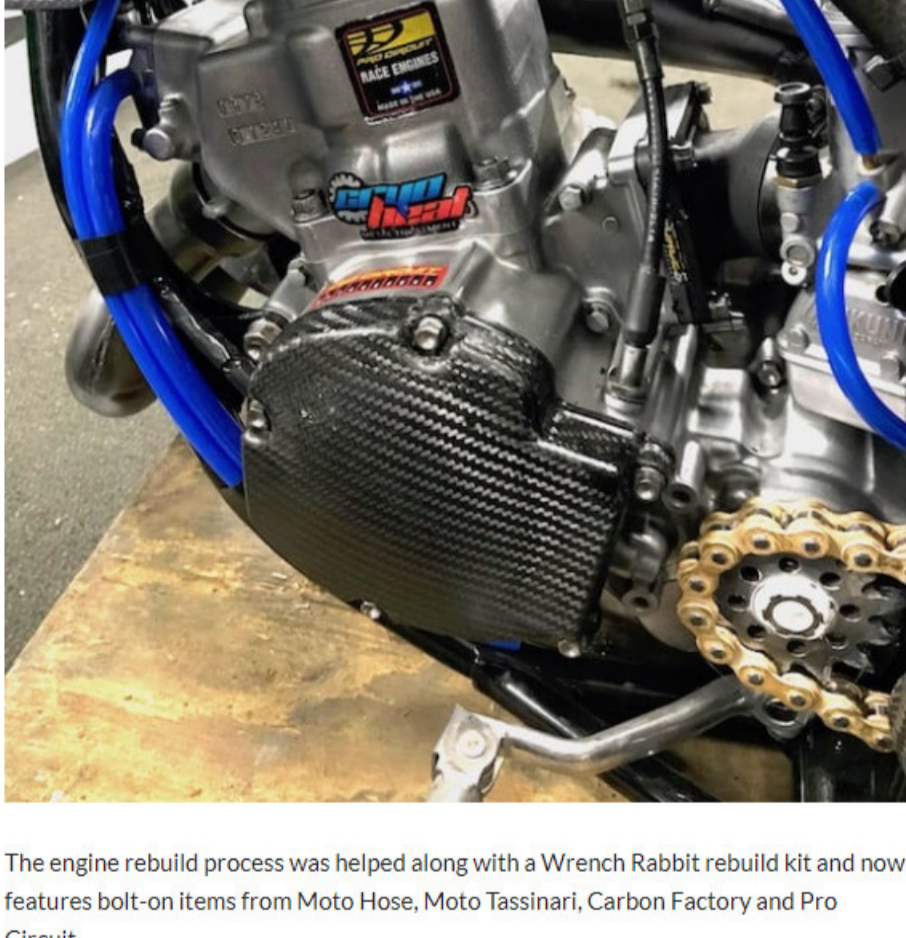

The engine as you can see was completely dismantled and all the parts that could go through the Cryo Heat process did. See more at www.cryoheat.com on this process.

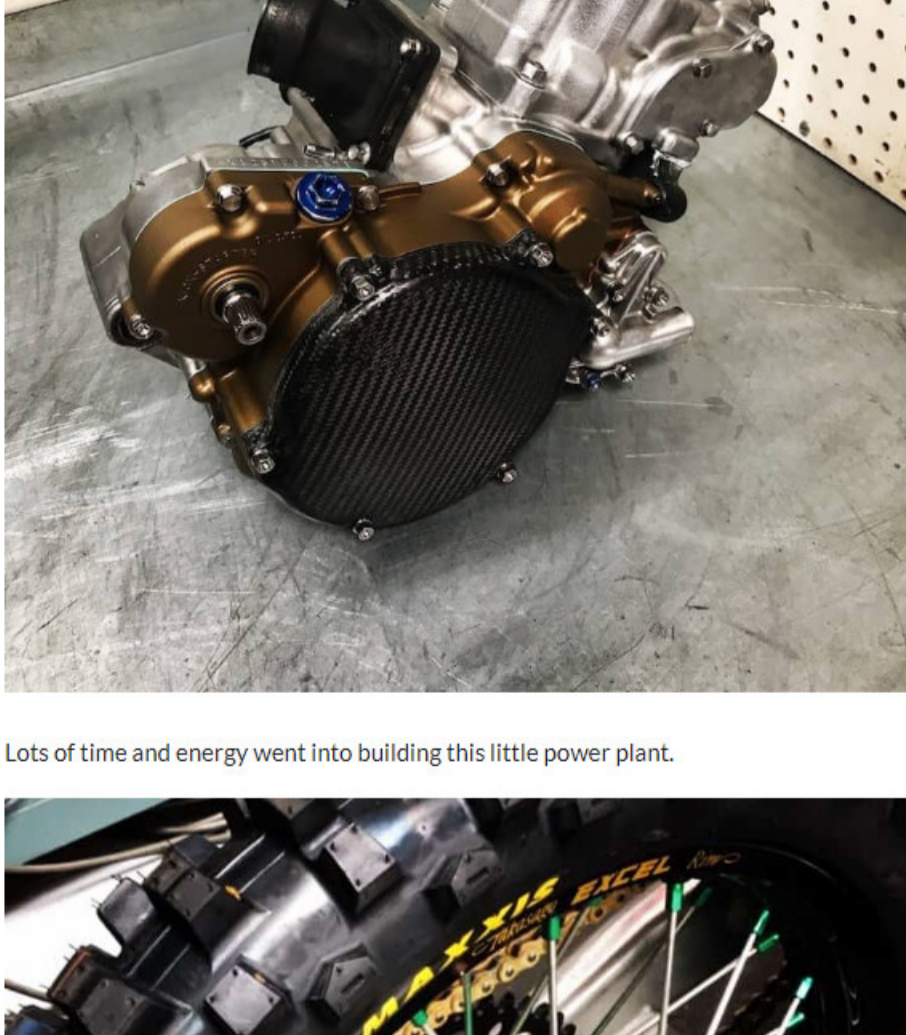

All the chassis bearings were replaced and treated as well. In person the black frame really makes the aluminum parts and the gold colored fork tubes pop.

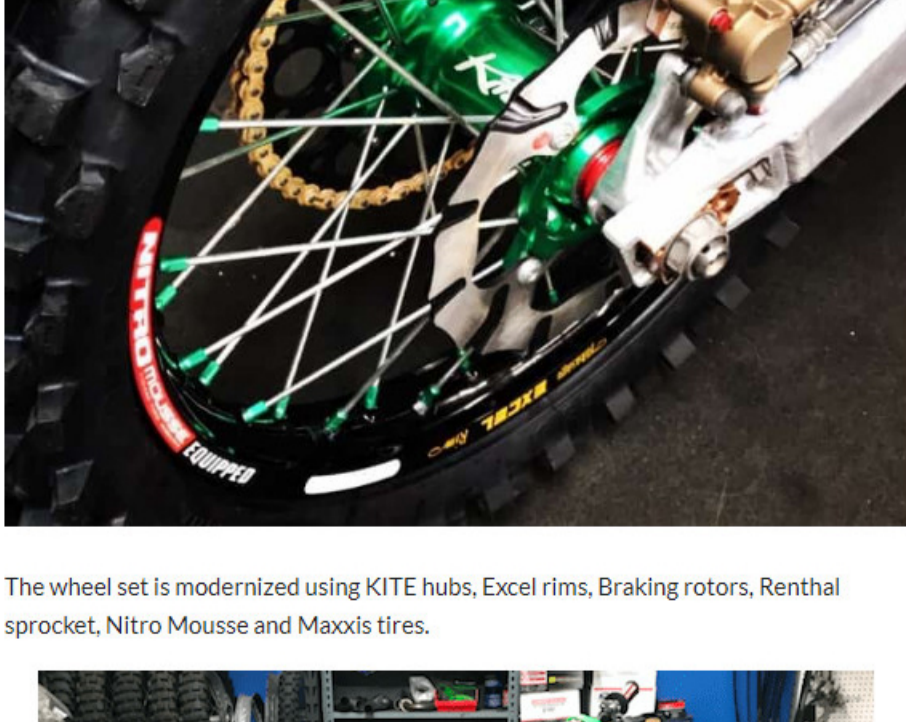

The brake calipers and engine side case received some coating love as well.

The engine rebuild process was helped along with a Wrench Rabbit rebuild kit and now features bolt-on items from Moto Hose, Moto Tassinari, Carbon Factory and Pro Circuit.

Lots of time and energy went into building this little power plant.

The wheel set is modernized using KITE hubs, Excel rims, Braking rotors, Rental sprocket, Nitro Mousse and Maxxis tires.

This is one very sweet looking machine stay tuned for more very shortly!
