

# Mixing Seed Starting Soil is as Easy as...

## Compost

Whether it's compost from the pile, the worms, or bought in large scale, it has to be the freshest ever. No bark, no bite.

## Coco Coir

There are many options out there to help with water retention, but coco coir is my go to for sustainability, and one heck of an amazing smell.

## Perlite

Easy to source, and a no-brainer for getting the soil to be as light and free for optimal root growth for small seedlings.
