

AIR SHIELDS

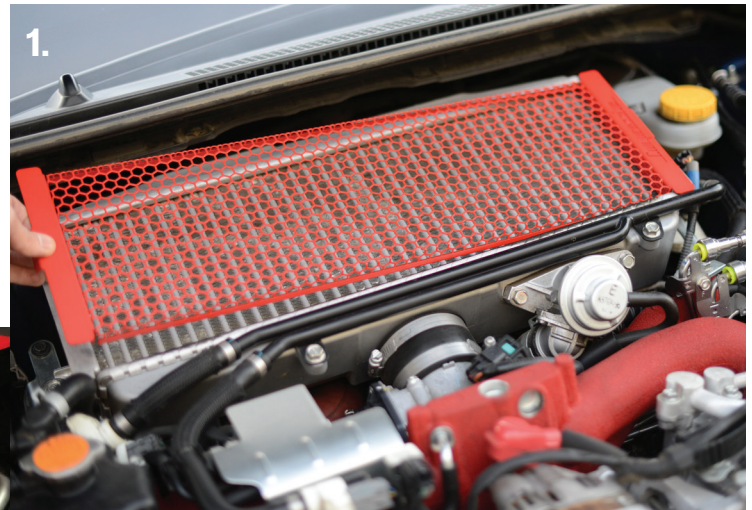

INSTALLATION INSTRUCTIONS

TOOL LIST

L Key Wrench

First, take the Air Shields and place them on top of the inter-cooler and press down until seated flush with the it.

Note: that the "Compressive Tuning" laser cut logo should be on the RIGHT side of the inter-cooler.

Next, position the bracket to sit under the inter-cooler notch and lined up with the Air Shield hole.

Using the L key, remove and re-install the bolt through both the Air Shields and the bracket to complete the installation.

Note: on the right side you may need to position the bracket first before lowering the Air Shield for easier installation.
