

Dear Teacher,

A student in your class will be wearing a **Revibe Connect**.

We wanted to let you know:

- 1) what it is &
- 2) how it will be used in your classroom.

Invented by a school psychologist

After providing consultation for 1,000+ students with developmental needs, Rich wasn't satisfied with the current products on the market for kids struggling to focus.

So he made Revibe, now used in 20,000+ schools.

The gist

- The device periodically sends **gentle, whisper-quiet vibration reminders** to the student's wrist.
- These vibrations serve to **discreetly remind the student to be on-task**, decreasing educator time spent redirecting distracted students.

The result

- In our research, we've seen an average **19% increase in time spent on-task** after wearing Revibe.

In your classroom

- Students "respond" to Revibe's vibration reminders by tapping its screen. We're happy to report **consistent feedback from educators that tapping is not a distraction** to users or peers!

Tap twice for "Yes, I'm on-task"
Tap once for "No, I'm off-task"

- With **limited functionality specific to school use**, Revibe is **NOT a smart watch**, and can't load other apps or functions. We wouldn't want to distract anyone!

- Revibe collects data on **focus, attention & movement**, which can be seen on the **Revibe Connect app** for iOS/Android.

Thank you!

Our users are typically those that struggle with lengthy task completion, lower academic outcomes, and distractibility, so **we truly appreciate your understanding** in letting them wear Revibe Connect in your classroom.

If you have any questions or concerns, **please feel free to reach out to us**. We're always happy to help!
