

Blumat®

Instructions Guide

0,2L ⌚ 24h

Blumat – UNIVERSAL BOTTLE ADAPTER

A simple watering system with a constant water release, specially designed for patio or garden plants. Almost all standard 0.25-litre plastic bottles fit the adapter. Insert the filled bottle and ceramic cone into the soil: the porous cone will slowly start to distribute 200 ml of water throughout the day to your plant or flower. Use the XL version for watering large flower pots and, for example, tomato or cucumber plants (releases about 300 ml of water every 24 hours).

0.2 l / 24 h
