

Blu Carrot Soaker Hose Installation

Sustainable Village • 303-998-1323 • info@sustainablevillage.com • www.sustainablevillage.com

Attach IG16217 Measuring tool to the end of a BluSoak tape line. If with a good valve (globe valves hardest to find but work the best) you can adjust the water level in the tube until it's 2-3' up. At that point, the soaker hose when on will use about $\frac{1}{4}$ gallon per foot per 24 hours. The amount of water is in the same ratio as the water level – e.g. if you double the height, you will double the water flow.

Kit includes:

- 5 ft of clear vinyl tubing
- 1 Soaker Hose Connector/Valve
- 2 in of 8mm black supply line
- 1 Blumat Elbow
- 4 Strips of Garden Tape
