

# Insect Repelling Time

Hi, everyone, my name is Ron and I am with Cleanrth Products. Over the last 20 years I have been in the electronic pest repelling business. I have been designing, producing, and selling these wonderful insect repelling machines. Below, I would like to educate you on how Ultrasonic Repelling Works and explain what to expect when repelling insects away.

**Time Repelling:** When you first plug in your Cleanrth Advanced Ultrasonic Insect Repelling System the amount of **Time it takes to eliminate the insect issue Varies.**

- a) I've seen times where it's almost instantaneous and all the insects leave within a few days.
- b) I've often seen it take the typical 16-20 days
- c) However, the real tough issues can take between 4 weeks to 6 weeks depending on the severity of the insect problem. (most manufacturers say to allow 4 - 6 weeks to fully eradicate / repel the area)
- d) Because these Insect Repelling Times Vary so much, we have put a plan together for you to follow up to the 16 - 20 day mark. After this mark we ask you to contact us so we can help / move to our stage II worth of repelling help. If you do reach this point, remember that your device is still repelling your problem this entire time, it's just that you might need that little extra help from us to fully eliminate the issue. Time and time again, I've talked to frustrated people at the 16-20 day mark, but 1 week later their problem is repelled / resolved with a little help from us. Ultimately, solving the issue comes down to time and repelling power.

## What You Tend To See During the Repelling Process:

- a) You see nothing once the unit is plugged in and the insect problem is repelled. This happens a lot of the time. In a lot of these cases the issue within the home was not that bad and the repelling process was easy.
- b) They scatter all over the place, meaning you see them just walking around out in plain sight. This happens usually within the first week then it should start to taper off as they flee.
- c) We've seen insects go and hide but 3 weeks later you'll see them crawling across the floor. The device disorientated them and the insects went into a shock mode where they simply stopped moving & tried to hide.
- d) **We've seen and heard about insects accumulating just under the device.** Like in (c), these insects are disorientated and shocked; this is a sign of the repelling process. Please clean them up and proceed with the repelling process. In all cases, we recommend that you keep using the Cleanrth Insect Repeller after the insect issue is resolved to keep any new insect intruders from coming back.

**Conclusion:** We care about your success in repelling insects away from your home or business, which is why we put this program together. Additionally, we know it takes time to repel insects away and that is why all Cleanrth Advanced Ultrasonic Insect Repellers come with a **One Year Money Back Guarantee** plus a **One Year Warranty.**
