EZ-MOUNT

Ultrasonic Rodent Repeller

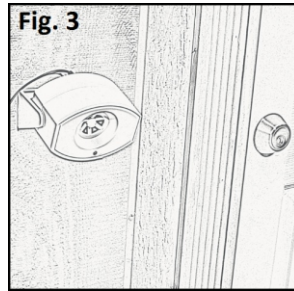

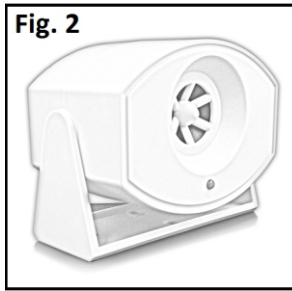

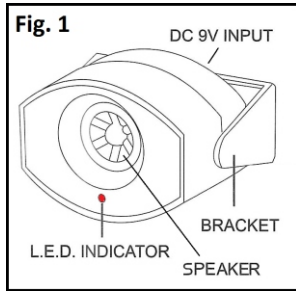

Fig. 1 There is one Red LED that lights up on the front of the EZ-Mount. This indicates the EZ-Mount is turned on and repelling.

Fig. 1 There is one dedicated Rodent Repelling Ultrasonic Speaker. This emits the sounds that repels the rodents. It's always best to aim the speaker toward the most open area when positioning the EZ-Mount. Blocking the speaker will smother the sound and reduce its effectiveness.

Fig. 1 There is a bracket that comes with the EZ-Mount that allows you to mount the EZ-Mount to a wall or ceiling for better positioning.

Fig. 1 The EZ-Mount is powered by a plug-in adaptor that plugs directly into the back of the EZ-Mount while the other end plugs into a common US 120V Outlet. There is no on or off switch; plugging-in the EZ-Mount turns on the speaker and starts to repel.

Fig. 2 The bracket allows the device to sit on any hard surface (**Fig 2.**) or to be attached to a wall or ceiling (**Fig. 3**). It also turns over 200 degrees, allowing the device to be pointed in the direction you prefer.

FAQs

Q: Will the EZ-Mount bother my Cat, Dog or Bird?

A: No, it's 100% safe, but please do not use around Rodent Type Pets such as Pet Mice, Pet Rats, Pet Rabbits, Pet Gerbils, etc. This technology does not hurt living things but rather irritates, disorients and repels. We always say do a quick test by plugging-in the device right next to your pet. If you get an unusual reaction --as if your pet wants to get away -- then please do not use the EZ-Mount around your pet.

Q: Can I use the EZ-Mount Outside?

A: Yes, but it needs to be protected/covered against rain.

Q: Can I use this device on an extension cord or plug flat strip?

A: Yes, this is a great way to power and get your EZ-Mount position to that right spot.

Coverage, Placement and Adjustments

1) **Example of Rodent Issue:** Lets say you have a **Minimal Mouse** Problem in the Kitchen Area.

2) The size of a typical kitchen is within spec/area size of what one unit can cover, so **one EZ-Mount** should cover a minimal mouse issue just fine.

About Coverage? The EZ-Mount has the ability to repel Rodent up to 5,000 Sq Ft of Open Area. **This unit emits Very Powerful Ultrasonic Sounds**, so it is going to do the job when used correctly! Please understand that when the EZ-Mount is placed in enclosed rooms, these sounds lose intensity as they encounter walls, ceiling, doors and other objects.

3) Please make sure not to smother the front of the device when positioning the unit. Position/Aim the EZ-Mount to have free view of the area it's repelling.

4) Now simply get your Cleanrth EZ-Mount Ultrasonic Rodent Repeller properly plugged into a common US 120Volt outlet. Once plugged in, the EZ-Mount **red indicator light** will turn on and immediately start repelling the rodent issue.

5) If this mouse issue in the kitchen does not seem to improve by the 14-day mark. This usually means this mice problem is more severe than originally expected and it will be time to cover multiple rooms surrounding the kitchen.

The idea goes for all rodent pest issues. When you encounter more severe rodent pest problems, the way to handle this type of problem is on a room-to-room basis. This system creates superior coverage that will basically Dominate the area on both sides of the wall!! Rodent pests will have no where to go but out because they're being repelled to the Max!!!

To fully maximize the effectiveness of the Cleanrth EZ-Mount:

1) Run 24-hours a day, 7 days a week. This is a low-power consumption device that is made to discreetly repel away your rodent problem.

2) For best results, place the Cleanrth EZ-Mount as close as possible to your troubled area.

3) Extension cords are great tools that can be used to hit hard-to-reach areas and angle the unit for better positioning.

Not seeing adequate results at the 16 day mark of repelling?
