EZ-MOUNT

Ultrasonic Rodent Control | Dedicated Rat Repeller

QUICK - GUIDE

We care about your results!

QUICK - SETUP - GUIDE

Step 1 Choose a spot to set your EZ-Mount that is closest to the Rodent Problem. At the same time position/aim the device facing the most open area of that room or area. This good, open coverage allows the sounds to fully cover the area.

Step 2 Remove the power adaptor from its box and insert the plug end into the 9V DC Input jack located on the back of the unit. Plug the other end in a standard US 120V electrical outlet. The **Red indicator light seen in Fig. 1 above will come on indicating the EZ-Mount is turned on & working.**

If your problem still persists after the 16-20 day mark. Please Contact Us as we will move to a **Stage 2** worth of Help

Step 3 Now that your EZ-Mount is mounted and positioned in the best spot to repel this Rodent Pest Issue, Allow at least 14 days (two weeks) worth of repelling to take place.

Step 4 The 14-day mark is the turning point on what we do next. At the 14-day mark, clean up any rodent droppings and start to closely monitor to see if there is any more rodent activity happening.

**If you do not notice any new activity:
Great! Your pest issue should be gone.**

If there is still activity going on, then the next step is to Contact Us. We will help you make some changes to ensure your success.

SUMMARY

Rodent pests will usually clear up within 14 -16 days when repelling with the EZ-Mount. If you still notice activity after 2 weeks, this usually means there's a more severe issue than initially expected. Please contact us so that we can help you understand what's going on and let us help you move to the **Stage 2** of our **Rodent Repelling program.**

If **Ordered Online**, please **Contact Us** via the **website** you used.
