

## [Pest Repelling Times](#)

**Rodents** - Results seen in 16-20 Days (sometimes sooner)

**Insects** - This process takes longer with insects -- sometimes as long as 4 to 6 Weeks. This is because your home is a huge world to them; they don't know where the exit is and the repeller is making them disorientated.

We have had many, many reports, as well as our own experiences, where insects pick up and leave right away.

Sometimes we have noticed extra activity as they try to escape the effects of the repeller.

Other times, we've seen the insects huddle up under our pest repellents. This process of repelling can be so debilitating that it causes the insects to stop doing their regular routine. This is a good sign as this means they're definitely being disturbed. We ask that you clean them up and keep continuing to use the repeller. Eventually, the issues were eliminated in all cases.

Please don't get discouraged if it's taking time; It's just that, overall, repelling Insects tends to take more time than other pests. Once the insect issue is under control, you should continue to use the device to prevent other insects from becoming an issue.

**We ask that you follow our instructions and run our routine. If you do get to the 16-20 day mark and you're still encountering a tough insect issue please allow us to help. We will be here to help you deal with tough insect-repelling cases.**
