# QUICK - GUIDE

## Total of four On/Off Switches

Every switch Turns On an Indicator Light represented on the front of the QuadCore.

- ① Ultrasonic Switch ON = **Green Indicator Light (Blinking)**
- ② Mosquito Reducer Switch ON = **Blue Indicator Light (On FULL TIME)**
- ③ Electromagnetic Switch ON = **Red Indicator Light (Blinking)**
- ④ Air Clean Pest Reducer Switch ON = **Orange Indicator Light (On FULL TIME)**

## Helpful Information

The **on / off switches** can sometime feel like they're not switched on. In this case simply look for the **indicator light** representing that function. **Indicator light on = function working. Indicator light off = function off**

- (1) Simply turn on all the function switches ① ② ③ ④ to the **ON Position**.

This way you would be getting all of the advantages of repelling and air cleaning. Later, once you have fully read the instruction booklet you could adjust according to your specific needs.

- (2) Now simply plug your QuadCore in the area that has the Pest Issue. When positioning the QuadCore, it is Key that it has Full View of the area it is repelling; try not to cover/smother face of the unit.

- (3) Indoor Coverage: All the switch functions have different coverage ratings. Rooms, walls, doors, etc. play a huge factor in reducing the performance and coverage of the QuadCore device when repelling indoors. Covering on a room-to-room basis maximizes repelling. The mosquitoes reducer & air clean pest reducer can cover 500 Square Feet, so you'll likely need a device in each room for best coverage.

**Outdoor Use:** When using outdoors the QuadCore needs to be Fully Protected Against Rain/Water. The QuadCore becomes very directional when used outdoors, so always face the device towards the problem areas. Extension Cords work Great for positioning.
