

Cleanrth Air Coverage Examples

Cleanrth Air : Air Cleanser Stage I

The **Air Cleanser Stage I Switch** covers 500 square feet of "Open Area." Think one unit per room with a door for best coverage.

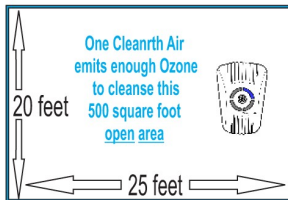

Walls and Doors reduce the effective range so you'll probably find that each room will need one Cleanrth Air to maximize the reduction of odors and airborne pollutants.

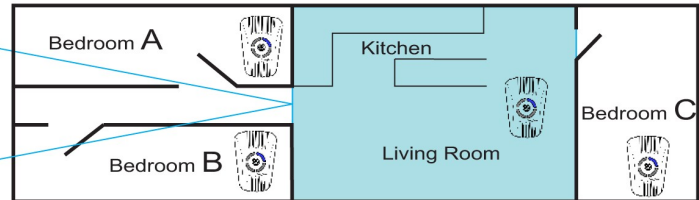

Cleanrth Air : Air Cleanser Stage II

The **Air Cleanser Stage II Switch** covers 500 square feet of "Open Area." The average living room is 450 sq. ft. in size, so one unit will easily cover an area that size.

Walls and Doors reduce the effective range so you'll probably find that each room will need one Cleanrth Air to maximize the reduction of odors and airborne bacteria/viruses.

Pest Deterrent

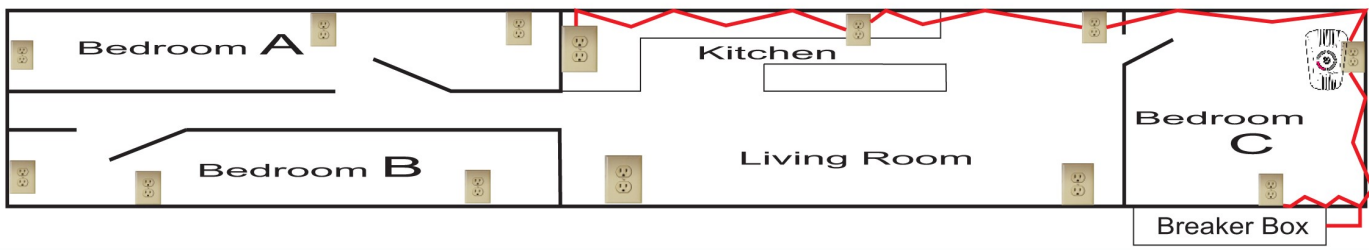

The **Pest Deterrent Sound Switch** covers 5,000 square feet of "Open Area"

One unit is enough to clear the entire house, but Walls and Doors reduce the effective range of ultrasonic sounds, so rooms A, B, & C will receive less coverage. If rooms A-C are still having pest issues then you would need to place units in those rooms as well.

Internal Pest Deterrent

The electromagnetic pulse from the **Internal Pest Deterrent Switch** will travel down about 150 feet of electric wiring / usually 1 Full Breaker. In the example below, one breaker covers Bedroom C into the Kitchen area.
