

This Is Not An Audible Device!

This is the **TSAR 520's** test button. If pressed, the device starts emitting a sound that you can hear. The unit **will no longer** repel when on this setting; the purpose of this button is to ensure that the device is working.

If the device is **audible**, this means the unit is in **test mode**. To return the unit into the **standard repelling mode** simply press the test button. When the device becomes **quiet**, you know the unit is repelling.

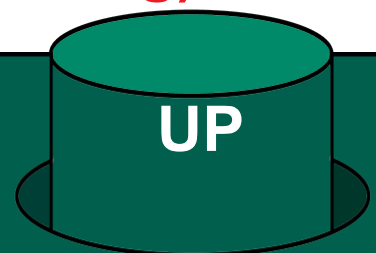

TEST MODE - ON
(Not Repelling)

STANDARD REPELLING
TEST MODE - OFF
(Repelling)

TEST

TEST

Now again, the **TSAR520** will **not** repel animals when it is in **test mode**.

This is because the test mode changes the frequencies, taking the unit **out of the animal repulsive sounds** and simply into the **human hearing range**.
